**Assessment of land use changes in Mukdaham and Nakhon Phnom provinces (NE Thailand) by means of Remote Sensing** Nils Rennenberg,2002-11-26 Inhaltsangabe Abstract Tropical land use changes predominantly the clearing of tropical rain and monsoon forests have long been recognized as a trend with dramatic consequences FAO estimated the global loss of rain forest area at 0 6 to 0 9 % per annum in 1993 Most of it can be attributed to the conversion of forest lands to agricultural areas In Southeast Asia two countries have suffered from this phenomenon more than any other nations the Philippines and Thailand Between 1961 and 1975 the forest reserves of Thailand have been reduced from 57 % to 37 % of the total area while at the same time the area put to agricultural use has almost doubled Only a small part of that process was due to organized resettlement programmes to an overwhelming extent the deforestation has been performed illegally by spontaneous activities of the rural population The share of forests further declined to 28 9 % in 1998 at a current rate of 0 7 % per year meaning that Thailand s forest cover has roughly halved since 1960 The author of this thesis stayed as a visiting researcher at the Asian Institute of Technology AIT immediately north of Bangkok for 6 months from November 2000 until April 2001 The AIT is a small international university for graduate studies with students and teachers from more than 40 countries The core institution for this scientific cooperation was the Asian Center for Research on Remote Sensing ACRoRS of the AIT s School of Advanced Technologies SAT Field work in Northeast Thailand was carried out in two legs in February and April 2001 As an underlying principle of this study it was attempted to incorporate problems from the realms of social as well as physical geography i e to maintain a balance between questions of applied geography regional studies and remote sensing This also means that no special focus was put on advanced RS methodology such as the development of new image processing techniques the study is rather based on a somewhat holistic approach joining aspects from many different fields of science as diverse as geology geomorphology climatology agriculture and agricultural economics sociology ethnology politics and spatial planning Accordingly the basic objectives were to give a geographical description characterization of the Northeastern Region of Thailand in terms of its physical properties as well as its social and economical peculiarities to try a quantification of forest     Thailand Michelin Travel Publications (Firm),2002 The legendary bestselling and longest running guide to Southeast Asia s most popular destination is the only guide to Thailand written for travelers on any budget Includes suggested itineraries for classic routes tailored trips off road excursions and travel with children 150 maps     *Global Ocean Science Report* Intergovernmental Oceanographic Commission,UNESCO,2020-12-14 The world ocean is a life supporting system for humanity yet it remains largely unknown Based on data collected from around the world the Global Ocean Science Report 2020 offers a global record of how where and by whom ocean science is conducted It monitors our capacity to understand the ocean and seize new opportunities More generally the Report underlines the essential role of ocean research and international cooperation for all key issues of the 21st century     Human Sigma John H.
