

Function of the Spleen

- The spleen filters the blood.
- It's composed of T-cells, B-cells, macrophages, dendritic cells, natural killer cells, and red blood cells.
- It captures antigens from the blood.
- Like the lymph nodes when the antigens are presented to the T-cells and B-cells the immune response is triggered.
- In the spleen the B-cells are set in motion and generate antibodies in large amounts.
- Another function of the spleen is to get rid of any old red blood cells.
