Giraldo Herrera,2018-03-09 Shamanism is commonly understood through reference to spirits and souls However these terms were introduced by

Christian missionaries as part of the colonial effort of conversion So rather than trying to comprehend shamanism through medieval European concepts this book examines it through ideas that started developing in the West after encountering Amerindian shamans *Microbes and Other Shamanic Beings* develops three major arguments First since their earliest accounts Amerindian shamanic notions have had more in common with current microbial ecology than with Christian religious beliefs Second the human senses allow the unaided perception of the microbial world for example entoptic vision allows one to see microscopic objects flowing through the retina and shamans employ techniques that enhance precisely these kinds of perception Lastly the theory that some diseases are produced by living agents acquired through contagion was proposed right after Contact in relation to syphilis an important subject of pre Contact Amerindian medicine and mythology which was treasured and translated by European physicians Despite these early translations the West took four centuries to rediscover germs and bring microbiology into mainstream science Giraldo Herrera reclaims this knowledge and lays the fundamentals for an ethnomicrobiology It will appeal to anyone curious about shamanism and willing to take it seriously and to those enquiring about the microbiome our relations with microbes and the long history behind them

extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial biology and ecology chemistry building science and human physiology This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the ecosystem of built environments indoor microbiomes and effects on human health and well being It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions
