Lending Division,1985 **Biofilms in Wastewater Treatment** Stefan Wuertz,Paul L. Bishop,Peter A. Wilderer,2003-04-30 The central theme of the book is the flow of information from experimental approaches in biofilm research to simulation and modeling of complex wastewater systems Probably the greatest challenge in wastewater research lies in using the methods and the results obtained in one scientific discipline to design intelligent experiments in other disciplines and eventually to improve the knowledge base the practitioner needs to run wastewater treatment plants The purpose of *Biofilms in Wastewater Treatment* is to provide engineers with the knowledge needed to apply the new insights gained by researchers The authors provide an authoritative insight into the function of biofilms on a technical and on a lab scale cover some of the exciting new basic microbiological and wastewater engineering research involving molecular biology techniques and microscopy and discuss recent attempts to predict the development of biofilms This book is divided into 3 sections Modeling and Simulation Architecture Population Structure and Function and From Fundamentals to Practical Application which all start with a scientific question Individual chapters attempt to answer the question and present different angles of looking at problems In addition there is an extensive glossary to familiarize the non expert with unfamiliar terminology used by microbiologists and computational scientists The colour plate section of this book can be downloaded by clicking [here](#) PDF Format 1 MB **Psychrophiles: From Biodiversity to Biotechnology** Rosa Margesin,2018-05-13 Cold adaptation includes a complex range of structural and functional adaptations at the level of all cellular constituents and these adaptations render cold adapted organisms particularly useful for biotechnological applications This book presents the most recent knowledge of i boundary conditions for microbial life in the cold ii microbial diversity in various cold ecosystems iii molecular cold adaptation mechanisms and iv the resulting biotechnological perspectives Population Biology of Infectious Diseases R M Anderson,R M May,P E M Fine,1982-10-01 *Dryland Ecohydrology* Paolo D'Odorico,Amilcare Porporato,2006-03-14 By combining the analysis of biotic and abiotic components of terrestrial ecosystems this volume provides a synthesis of material on arid and semiarid landscapes which is currently scattered in a number of books and journal articles The focus on water limited ecosystems is

motivated by their high sensitivity to daily seasonal and decadal perturbations in water availability and by the ecologic climatic and economic significance of most of the world's drylands. Conceived as a tool for scientists working in the area of the earth and environmental sciences, this book presents the basic principles of ecohydrology as well as a broad spectrum of topics and advances in this research field. The chapters have been contributed by authors with different expertise who work in several arid areas around the world. They describe the various interactions among the biological and physical dynamics in dryland ecosystems starting from basic processes in the soil-vegetation-climate system to landscape-scale hydrologic and geomorphic processes, ecohydrologic controls on soil nutrient dynamics, and multiscale analyses of disturbances and patterns.

Descartes' Error Antonio Damasio, 2005-09-27 An ambitious and meticulous foray into the nature of being. The Boston Globe: A landmark exploration of the relationship between emotion and reason. Since Descartes famously proclaimed "I think, therefore I am," science has often overlooked emotions as the source of a person's true being. Even modern neuroscience has tended until recently to concentrate on the cognitive aspects of brain function, disregarding emotions. This attitude began to change with the publication of *Descartes' Error* in 1995. Antonio Damasio, one of the world's leading neurologists, *The New York Times* challenged traditional ideas about the connection between emotions and rationality. In this wondrously engaging book, Damasio takes the reader on a journey of scientific discovery through a series of case studies demonstrating what many of us have long suspected: emotions are not a luxury; they are essential to rational thinking and to normal social behavior.

Microbial Adhesion and Aggregation, **Microbial Mats** Joseph Seckbach, Aharon Oren, 2010-07-17 This book provides information about microbial mats from early fossils to modern mats located in marine and terrestrial environments. Microbial mats, layered biofilms containing different types of cells, are most complex systems in which representatives of various groups of organisms are found together. Among them are cyanobacteria and eukaryotic phototrophs, aerobic, heterotrophic, and chemoautotrophic bacteria, protozoa, anoxygenic photosynthetic bacteria, and other types of microorganisms. These mats are perfect models for biogeochemical processes such as the cycles of chemical elements in which a variety of microorganisms cooperate and interact in complex ways. They are often found under extreme conditions, and their study contributes to our understanding of extremophilic life. Moreover, microbial mats are models for Precambrian stromatolites; the study of modern microbial mats may provide information on the processes that may have occurred on Earth when prokaryotic life began to spread.
