This work contains the proceedings of the 7th International Symposium on Microbial Growth on One Carbon C1 Compounds a triennial meeting held at the University of Warwick in August 1992 The theme of the book centres around the microbiology of C1 compounds that is those compounds such as methane methanol carbon monoxide and carbon dioxide and covers the physiology biochemistry and molecular genetics of the micro organisms responsible for utilizing such compounds It also addresses a number of important ecological and environmental aspects of C1 microbes organisms which are certain to play a role in the cycling of important greenhouse gases such as carbon dioxide and methane The impact of these organisms on a global scale for example as a source or sink for methane is discussed The numerous applied and biotechnological aspects of these micro organisms is also dealt with in detail Microbial Growth of C1-Compounds, 1977 Microbial Growth on C1 Compounds H.W. Verseveld, J.A. Duine, 1987-03-31 The 5th International Symposium on Microbial Growth on C Compounds was held at the Biological 1 Center of the University of Groningen Haren The Netherlands 11 16 August 1986 The meeting attracted well over 200 participants from 15 countries This volume contains the formal presentations made at that time which because of the breadth of topics covered were divided into seven sections of related papers This meeting under the chairmanship of Wim Harder was both scientifically and socially very successful This success cannot only be credited to the main presentations but also to the well cared for 121 poster presentations whereof the abstracts have been published separately The series of Symposia will be continued in 1989 in the Federal Republic of Germany We wish to acknowledge the invaluable help of Joke Daniels Roberta Stroer Schneider Karin Uyldert Hansje Bartelson and Josine van Verseveld Stroer who retyped the manuscripts resulting in a uniform presentation of these proceedings **Microbial Growth on C1 Compounds** Mary E. Autotrophic and methylotrophic microorganisms are able to grow at the expense of one carbon compounds e.g. carbon dioxide formaldehyde as the principal carbon sources for the synthesis of cell material using light inorganic compounds or one carbon compounds as energy sources The study of the special adaptations required in aerobic and anaerobic microorganisms to sustain an autotrophic or methylotrophic mode of life is a fascinating field of research for scientists from various disciplines Current research efforts not only focus on fundamental aspects i.e. metabolic pathways and their regulation ecology energy conversion and genetics but also the possible application of these organisms in waste water treatment degradation of xenobiotics single cell protein production as biocatalysts for the production of fine chemicals draws strong attention The aim of this series is to provide annual reviews on the biochemistry physiology ecology genetics and application of microbial autotrophs and methylotrophs The scope of the series includes all aspects of the biology of these microbes and will deal with phototrophic and chemolithotrophic prokaryotic autotrophs carboxydobacteria acetogenic methanogenic and methylotrophic bacteria as well as methylotrophic eukaryotes The exciting advances made in recent years in the study of these organisms is reflected in the chapters of this first volume which have been written by experts in the field We would like to express our sincere thanks to all the contributors for their stimulating and comprehensive chapters **Microbial Growth on C1 Compounds** H.
