Dehalogenation Max M. Häggblom, Ingeborg D. Bossert, 2007-05-08 Halogenated organic compounds constitute one of the largest groups of environmental chemicals The industrial production of new halogenated organic compounds has increased throughout the last century peaking in the 1960s and continuing in widespread use today Organohalides are integral to a variety of industrial applications including use as solvents degreasing agents biocides pharmaceuticals plasticizers hydraulic and heat transfer fluids and intermediates for chemical synthesis to name a few It is important to recognize the beneficial aspects of halogenated organic compounds as well as their potentially deleterious impact on the environment and health Recognition of the adverse environmental effects of many types of organohalide compounds has led to efforts to reduce or eliminate the most problematic ones Although organohalide compounds are typically considered to be anthropogenic industrial compounds they have their counterpart in several thousands of natural biogenic and geogenic organohalides representing most classes of organic chemicals Natural sources account for a significant portion of the global organohalogen budget This volume authored by recognized experts in the field provides a current perspective on how both natural and synthetic organohalides are formed and degraded and how these processes are incorporated into a global halogen cycle The focus is on microbial processes since these play a major role both in the production and degradation i e cycling of halogenated organic compounds in the environment This book is organized into five parts Part I Introduction provides a global perspective on the issues of organohalides and their fate in the environment

Plant-Microbe Interactions in Agro-Ecological Perspectives Dhananjaya Pratap Singh, Harikesh Bahadur Singh, Ratna Prabha, 2017-12-15 This book puts an updated account on functional aspects of multiphasic microbial interactions within and between plants and their ecosystem. Multipronged interaction in the soil microbial communities with the plants constitute a relay of mechanisms that make profound changes in plant and its micro environment in the rhizosphere at physiological, biochemical and molecular levels. In agro ecological perspectives such interactions are known to recycle nutrients and regulate signalling molecules, phytohormones and other small molecules that help plant growth and development. Such aspects are described deeply in this book taking examples from various crop plants and microbial systems. Authors described the most advantageous prospects of plant microbe interaction in terms of inoculation of beneficial microorganisms, microbial inoculants with the plants in which microbes proliferate in the root rhizosphere system and benefit plants with definite functions like fixation of nitrogen, solubilization and mobilization of P, K, Zn and production of phytohormones. The subject of this book and the content presented herein has great relevance to the agro ecological sustainability of crop plants with the help of microbial interactions. The chapters presented focus on defining and assessing the impact of beneficial microbial interactions on different soils, crops and abiotic conditions. This volume entails about exploiting beneficial microbial interactions to help plants under abiotic conditions, microbe mediated induced systemic tolerance, role of mycorrhizal interactions in improving plant tolerance against stresses, PGPR as nutrient mobilizers, phytostimulants, antagonists and biocontrol agents, plant interactions with *Trichoderma* and other bioagents for sustainable intensification in agriculture, cyanobacteria as PGPRs, plant microbiome for crop management and phytoremediation and rhizoremediation using microbial communities. The overall content entrusts advanced knowledge and applicability of diversified biotechnological, techno commercial and agro ecological aspects of microbial interactions and inoculants as inputs which upon inoculation with crop plants benefit them in multiple ways.

The Science of

Composting Eliot Epstein, 2017-11-22 FROM THE PREFACE The main objective of composting is to transform organic materials into a stable usable product Often organic materials which may have limited beneficial use in their raw state or have regulatory disposal constraints can be transformed by composting into marketable products The limits on beneficial reuse may be regulations or they may be due to the potential for materials to be putrescible or pathogenic Composting can be a solution for each of these The implementation of composting on a large scale in contrast to home or backyard composting involves materials handling Technological implementation of composting must be consistent with the biological demand of the system If the biological system is violated conditions will not be optimized for composting and problems such as odor generation insufficient aeration or moisture or a combination of these conditions may result Past problems and closure of facilities have been largely due to violations of the biological systems Product quality with respect to particle size inclusions moisture content and other physical aspects are a function of engineering design A well designed system must have the biological and engineering principles in harmony at all times

Remediation Engineering Suthan S. Suthersan, Jeff McDonough, 1996-10-24 In many cases the application of in situ technologies evolved as a necessity from a cost perspective However the basic understanding of the mechanisms and theory behind these technologies was treated as a black box Although we have seen some tremendous successes in the application of remediation technologies over the past several years we have also seen many cases in which a

technology has been incorrectly or inappropriately applied In most cases this misapplication has been the result of a poor understanding of the basic concepts and mechanisms behind the technologies Without proper understanding the potential for misapplication of technologies remains a serious economic and technical threat
