

Milk is known to be balanced food as well as highly nutritious food as it is rich in proteins, fats, carbohydrates, vitamins, minerals, essential amino acids, etc. Milk and its products consist of numerous nutrient contents, it serves as an excellent growth medium for all of the microorganisms (i.e., bacteria, viruses, fungi, and protozoans).

The microbial content of raw milk is important for the production of hygienic milk foods. Milk and its products such as milk, butter, cream, and cheese are all susceptible to microbial spoilage.

#### Contamination source of milk

The milk source is the mammals such as cows, buffalo, sheep, and goats. Milk is not sterile when obtained from animals. The source of milk contaminations:

1. The contamination from milking animals
2. The interior and exterior of the udder
3. The coat of the milking animals
4. The surrounding air of the farm and storage
5. The animal feed
6. The quality of water used
7. The quality of milk handling equipment and storage tanks used
8. Biofilms formation on dairy plant pipes.

#### Spoilage of milk

- The main components of milk are water, fat, protein, and lactose.
- Its high-water activity, moderate pH (6.4–6.6), and high nutrient content make milk an excellent medium for microbial growth.
- Both raw milk and pasteurized milk contain many types of microorganisms, they are refrigerated, yet they have limited shelf life.
- During refrigerated storage (at dairy farms and processing plants) before pasteurization, only psychrotrophs can grow in refrigerated milk storage such as *Pseudomonas*, *Flavobacterium*, *Alcaligenes*, *Listeria monocytogenes*, *Yersinia enterocolitica*, some coliforms, and *Bacillus* spp.
- Those that spoil milk after heating are the thermotolerant microorganisms surviving pasteurization such as *Micrococcus*, *Enterococcus*, *Streptococcus*, *Lactobacillus*, and spores of *Bacillus* and *Clostridium*.
- Molds and yeasts are usually eliminated during the pasteurization process therefore they cause milk spoilage after the heat treatment such as *Aspergillus*, *Byssoschlamys*, *Cladosporium*, *Candida* spp.
- To a lesser extent, the protozoan pathogens such as *Cryptosporidium* and *Giardia* have been found to contaminate milk.

The defects that occur in milk due to microorganism are:

Kind of defect	Related microorganisms
Shorter shelf life, rancidity, and bitterness	<i>Bacillus</i> spp.
Gelation	Psychrotrophic bacteria
