**Micro- and Nanofluidics for Bionanoparticle Analysis** Yong

Zeng,Xuanhong Cheng,2019-10-16 Bionanoparticles such as microorganisms and exosomes are recognized as important targets for clinical applications food safety and environmental monitoring Other nanoscale biological particles including liposomes micelles and functionalized polymeric particles are widely used in nanomedicines The recent development of microfluidic and nanofluidic technologies has enabled the separation and analysis of these species in a lab on a chip platform while there are still many challenges to address before these analytical tools can be adopted in practice For example the complex matrices within which these species reside in create a high background for their detection Their small dimension and often low concentration demand creative strategies to amplify the sensing signal and enhance the detection speed This Special Issue aims to recruit recent discoveries and developments of micro and nanofluidic strategies for the processing and analysis of biological nanoparticles The collection of papers will hopefully bring out more innovative ideas and fundamental insights to overcome the hurdles faced in the separation and detection of bionanoparticles *International Project*

**The Diversity of Life** Edward O. Wilson,1999 This classic by the distinguished Harvard entomologist tells how life on earth evolved and became diverse and now how diversity and life are endangered by us truly While Wilson contributed a great deal to environmental ethics by calling for the preservation of whole ecosystems rather than individual species his environmentalism appears too anthropocentric We should judge every scrap of biodiversity as priceless while we learn to use it and come to understand what it means to humanity And Signals abound that the loss of life s diversity endangers not just the body but the spirit This reprint of the 1992 Belknap Press publication contains a new foreword Annotation copyrighted by Book News Inc Portland OR
