Microcomputer Methods For Social Scientists:

Microcomputer Methods for Social Scientists Philip A. Schrodt, 1987 *Computer Applications in the Social Sciences* Edward E. Brent, Ronald E. Anderson, 1990 Presenting an introduction to computing and advice on computer applications this book examines hardware and software with respect to the needs of the social scientist It offers a framework for the use of computers with focus on the work station the center of which is a personal computer connected to networks by a telephone based modem **Basic Math for Social Scientists** Timothy Hagle, 1996-03-01 Aimed at providing readers who want a quick refresher course in mathematics with an informal review Timothy M Hagle's volume offers dozens of worked out examples of such mathematical concepts as algebra sets limits continuity differential calculus multivariate functions partial derivatives integral calculus and matrix algebra In addition Hagle provides problem sets so that readers can practice their grasp of standard mathematical procedures answers to these problem sets are contained in the appendixes Written in a friendly style *Basic Math for Social Scientists Problems and Solutions* provides readers with an informal approach to mathematical procedures without proofs **A Research Primer for the Social and Behavioral Sciences** Miriam Schapiro Grosof, Hyman Sardy, 2014-05-10 A Research Primer for the Social and Behavioral Sciences provides an introductory but comprehensive overview of the research process that primarily concerns human subjects This book discusses the methods of acquiring knowledge importance of a well chosen problem review of the literature and relationship between theory building and hypothesis testing The common sources of invalidity in practice non experimental research types Stevens classification of scales and estimation based on probabilistic sampling are also elaborated This text likewise covers the role of computer in research techniques for analysis of data univariate and bivariate statistics and assumptions underlying analysis of variance Other topics include the canonical correlation analysis non parametric analysis of variance deterministic problem analysis techniques and common errors in presentation of findings This publication is intended for novice investigators in the broad category of social and behavioral sciences **New Technology in Sociology** Grant Blank, James L. McCartney, Edward Brent, 2019-12-06 When technology has been applied in business environments its justification has usually been cast in terms of saving time or saving money In the social sciences the justification must be different the viability of sociology as a profession for example will not be enhanced by cost reductions The focus in this volume is on a different bottom line *Handbook of Emergent Methods* Sharlene Nagy Hesse-Biber, Patricia Leavy, 2013-10-15 Social researchers increasingly find themselves looking beyond conventional methods to address complex research questions This is the first book to comprehensively examine emergent qualitative and quantitative theories and methods across the social and behavioral sciences Providing scholars and students with a way to retool their research choices the volume presents cutting edge approaches to data collection analysis and representation Leading researchers describe alternative uses of traditional quantitative and qualitative tools innovative hybrid or mixed methods and new techniques facilitated by technological

advances Consistently formatted chapters explore the strengths and limitations of each method for studying different types of research questions and offer practical in depth examples

Introduction to the Comparative Method With Boolean Algebra Daniele Caramani,2009 Utilizing a systematic broad approach Introduction to the Comparative Method With Boolean Algebra gives readers the logical foundations of comparison with guided applications and is the ultimate comparative method text covering each of the current and most important issues in the field Author Daniele Caramani discusses the elements of scientific research including Mill s methods Boolean algebra classification and typologization and necessary and sufficient conditions and how these apply to concrete research in the social sciences This text is indispensable for upper level undergraduate and graduate students as well as researchers interested in methodology behavioral and social sciences history and logic BOOK JACKET

Odds Ratios in the Analysis of Contingency Tables Tamás Rudas,1998 This volume shows how odds ratios can be used as a framework for understanding log linear models Tightly organized the book moves systematically from the paradigmatic 2x2 case to more complicated cases Author Tamas Rudas carefully defines the odds ratio and demonstrates how it is a measure of association for tabular analysis Throughout the book Rudas provides real examples including those from the famous Stouffer data on American soldiers in World War II By presenting categorical data models in a unified framework readers will learn not only how these models are related but also additional interpretations of these models not usually covered in other texts

Analyzing Complex Survey Data Eun Sul Lee,Ronald N. Forthofer,2006 In this introduction to the different ways of analysing complex survey data the authors consider new analytical approaches review new software and introduce a model based analysis that can be used for well designed and relatively small scale social surveys

Working With Archival Data Glen H. Elder,Eliza K. Pavalko,Elizabeth Colerick Clipp,1993 The number of longitudinal data archives is growing almost daily yet no resource exists to help understand the relationship between research questions and archival data until now Drawing on a single project the Lewis Terman Study at Stanford University the authors illustrate how to use the model fitting process to select and fit the right data set to a particular research problem Employing a step by step approach this handy volume covers the measurement of historical influences the adaptation of existing coding schemes to temporal patterns that are characteristic of life records and the recasting of archival materials to illuminate contemporary questions that the data were not designed to answer

Sorting Data Anthony Peter Macmillan Coxon,1999-07-08 The method of sorting is a flexible easily used and enjoyable technique well suited to exploring and mapping conceptual domains to the study of subjective or folk classifications and to comparing existing classifications one with another Originating in linguistics and psychology sorting methods also known as own categories and pile sorting have diffused to a wide range of other social sciences This book provides the first systematic introduction to the method of sorting and draws material from new and widely scattered sources It covers the collection and analysis of data using free sorting as the main focus but includes other variants Methods are provided for describing and comparing sortings drawing on recent

developments in partition theory and combinational analysis and for measuring their similarity Appropriate methods are presented for the representation of both individual sortings and of the objects themselves multidimensional scaling correspondence analysis and clustering techniques Applications and available software are covered *Time Series Analysis* Charles W. Ostrom, 1990 The text gives a good basis for understanding the ideas of the time series models and estimation without overwhelming readers with the complexity of the subject Journal of the American Statistical Association Completely revised and updated this second edition of Time Series Analysis examines techniques for the study of change based on regression analysis Ostrom demonstrates how these regression techniques may be employed for hypothesis testing estimating and forecasting In addition analysis strategies for both lagged and nonlagged models are presented and alternative time dependent processes are explored Introduction to Applied Demography Norfleet W. Rives, William J. Serow, 1984-07 Identifies kinds and sources of demographic data and then explains how to use this information to determine demographic trends and their consequences **Typologies and Taxonomies** Kenneth D. Bailey, 1994-06-13 How do we group different subjects on a variety of variables Should we use a classification procedure in which only the concepts are classified typology one in which only empirical entities are classified taxonomy or some combination of both In this clearly written book Bailey addresses these questions and shows how classification methods can be used to improve research Beginning with an exploration of the advantages and disadvantages of classification procedures including those typologies that can be constructed without the use of a computer the book covers such topics as clustering procedures including agglomerative and divisive methods the relationship among various classification techniques including the relationship of monothetic qualitative typologies to polythetic quantitative taxonomies a comparison of clustering methods and how these methods compare with related statistical techniques such as factor analysis multidimensional scaling and systems analysis and lists classification resources This volume also discusses software packages for use in clustering techniques

Introduction to Survey Sampling Graham Kalton, 2020-04 Sample design is key to all surveys fundamental to data collection and to the analysis and interpretation of the data Introduction to Survey Sampling Second Edition provides an authoritative and accessible source on sample design strategies and procedures that is a required reading for anyone collecting or analyzing survey data Graham Kalton discusses different types of probability samples stratification pre and post clustering dual frames replicates response base weights design effects and effective sample size It is a thorough revision and update of the first edition published more than 35 years ago Although the concepts of probability sampling are largely the same there have been important developments in the application of these concepts as research questions have increasingly spanned multiple disciplines computers have become central to data collection as well as data analysis and cell phones have become ubiquitous but response rates have fallen and public willingness to engage in survey research has waned While most of the volume focuses on probability samples there is also a chapter on nonprobability samples which are becoming

increasingly important with the rise of social media and the world wide web **Agent-Based Models** Nigel

Gilbert,2019-11-15 The second edition of this popular book introduces agent based modeling an increasingly popular approach enabling researchers to build models where individual entities and their interactions are directly represented

Exploratory Factor Analysis W. Holmes Finch,2019-09-05 A firm knowledge of factor analysis is key to understanding much published research in the social and behavioral sciences Exploratory Factor Analysis by W Holmes Finch provides a solid foundation in exploratory factor analysis EFA which along with confirmatory factor analysis represents one of the two major strands in this field The book lays out the mathematical foundations of EFA explores the range of methods for extracting the initial factor structure explains factor rotation and outlines the methods for determining the number of factors to retain in EFA The concluding chapter addresses a number of other key issues in EFA such as determining the appropriate sample size for a given research problem and the handling of missing data It also offers brief introductions to exploratory structural equation modeling and multilevel models for EFA Example computer code and the annotated output for all of the examples included in the text are available on an accompanying website *Fractal Analysis* Clifford Brown,Larry

Liebovitch,2010-04-14 A specialized presentation of fractal analysis oriented to the social sciences This primer uses straightforward language to give the reader step by step instructions for identifying and analyzing fractal patterns and the social process that create them By making fractals accessible to the social science students this book has a significant impact on the understanding of human behavior Key Features Detailed examples help readers learn and understand the analytical methods presented Matlab codes for programs allow users to implement on their own some of the techniques described in the text Visit <http://www.ccs.fau.edu/liebovitch/larry.html> for more details Clear and logical explanations of fractals and their analysis enable the instructor to easily teach and the student to easily learn the material This is the only book designed to introduce fractal analysis to a general social science audience Learn more about The Little Green Book QASS Series Click Here

Multiple Correspondence Analysis Brigitte Le Roux, Henry Rouanet,2010 Requiring no prior knowledge of correspondence analysis this text provides anontechnical introduction to Multiple Correspondence Analysis MCA as a method in its own right The authors Brigitte Le Roux and Henry Rouanet present the material in a practical manner keeping the needs of researchers foremost in mind This supplementary text is appropriate for any graduate level intermediate or advanced statistics course across the social and behavioral sciences as well as for individual researchers Book Jacket *The Association Graph and the Multigraph for Loglinear Models* Harry J. Khamis,2011-01-12 The Association Graph and the Multigraph for Loglinear Models will help students particularly those studying the analysis of categorical data to develop the ability to evaluate and unravel even the most complex loglinear models without heavy calculations or statistical software This supplemental text reviews loglinear models explains the association graph and introduces the multigraph to students who may have little prior experience of graphical techniques but have some familiarity with categorical variable modeling The

author presents logical step by step techniques from the point of view of the practitioner focusing on how the technique is applied to contingency table data and how the results are interpreted
