Stair, Irwin Greenberg, 1990 **Readings in Production and Operations Management** Ahmad Ahmadian, Rasoul Afifi, William D. Chandler, 1990 Applied Statistics John Neter, 1993

Project Management in Manufacturing and High Technology Operations Adedeji Bodunde Badiru, 1996-06-07 Project management is a system originally developed within the construction industry for controlling schedules costs and specifications of large multitask projects In recent years manufacturers have discovered that project management s time tested techniques dovetail neatly with the current thinking on quality control and management in a highly competitive global marketplace The system has been increasingly recognized for its suitability in the manufacturing process and is now applied in virtually every area of production One of the foremost proponents of this trend is Adedeji Badiru an internationally recognized authority on project management whose books have helped thousands of companies adapt the system to their particular needs This completely revised Second Edition of Badiru s breakthrough publication *Project Management in Manufacturing and High Technology Operations* focuses on the dramatic increase in the use of high tech machinery in industrial operations and seamlessly integrates high tech themes into a general discussion of project management An introductory chapter on manufacturing analysis investigates how the latest concepts and techniques of project management are applied to manufacturing The main body of the book offers a wealth of new material including discussions of learning curve analysis basic models for forecasting and inventory control economic analysis of manufacturing techniques for data analysis and the application of expert systems The chapter on computer applications in project management is completely revised and updated to reflect the enormous strides taken in this area in recent years This book presents an up to date practical approach to project management in manufacturing Written by a pioneer in the application of project management to the manufacturing industries this revised and expanded Second Edition of *Project Management in Manufacturing and High Technology Operations* reflects the increased use of high tech machinery in industrial operations and the trends of recent years to apply project management methods to every phase of production Complete with numerous illustrations as well as exercises to wrap up each chapter this Second Edition features An emphasis on practical examples including many new case studies and a full chapter on the lessons learned from the space shuttle Challenger disaster Many new project management concepts and techniques that focus on manufacturing but can be applied to any project A new chapter on manufacturing systems analysis that provides the backdrop for the project analysis that takes place throughout the book Expanded discussions of the latest quantitative and managerial approaches including learning curve analysis basic models for forecasting and inventory control economic analysis of manufacturing techniques for data analysis and the application of expert systems A strong international perspective useful for multinational companies and for academic purposes This book

equips engineers and managers with the tools to effectively manage all aspects of a project including quality control schedules and expenses Used as a text in engineering or business courses it offers absorbing supplemental reading for students at the upper undergraduate and graduate levels Professor Badiru has been widely praised for his incisive and highly relevant case studies In this Second Edition the case study approach is expanded so that chapters typically include two real world examples of the project management techniques or issues in question In the final chapter Badiru takes a close and painful look at a high tech disaster the explosion of the space shuttle Challenger He offers rare and instructive insight into the devastating failure of a high tech project still poignant despite the passage of time Communicative throughout this volume provides a solid up to date reference for engineers and managers in manufacturing as well as for consultants and administrators in related fields Professor Badiru s proven reputation for providing interesting lecture material also makes Project Management in Manufacturing and High Technology Operations especially useful as a technology management text in both engineering and business schools Cover Design Illustration David Levy

Proceedings of the International Conference Theory and Applications in the Knowledge Economy Eduardo Tomé, 2016-07-08 Foreword TAKE 2016 is a dream that came true In about six months a group of friends and colleagues put together in an upcoming and very dynamic university a conference with 9 streams 3 keynotes and 3 special sessions 60 papers presented 6 posters and around 80 participants from 20 countries This is awesome I would like to deeply thank Aveiro University the GOVCOPP research centre the conference committee the keynote speakers the special session convenors the stream leaders the reviewers the authors and the administrative people for all their work and support I want to have two special words one for Blazenka Knezevic without whom the website would not have been possible the other for Gaby Neumann for work in these Proceedings Scientifically TAKE seems to be as important and new and far reaching We don't have shortage of models regarding the knowledge economy but we decisively lack to explore the relation between theory and practice TAKE is a step in exploring that difference We know that Exact sciences find the best answers and social sciences give the best questions J C Spender and we also know that Knowledge Management is more preached by scholars than done by practitioners Aino Kianto We assume the first idea and try to overcome the second Hopefully TAKE 2016 will be a great success Thank you for everything

Subject Guide to Books in Print, 1997 **UMTA Abstracts**, 1983-03 **Directory of Organizations & Researchers in Educational Management**, 1984 **A Long View of Research and Practice in Operations Research and Management Science** ManMohan S. Sodhi, Christopher S. Tang, 2010-09-09 From the Foreword by Marshall Fisher The Wharton School University of Pennsylvania As generation of academics and practitioners follows generation it is worthwhile to compile long views of the research and practice in the past to shed light on research and practice going forward This collection of peer reviewed articles is intended to provide such a long view This book contains a collection of chapters written by leading scholars practitioners who have continued their efforts in developing and or implementing innovative OR MS tools for solving real world problems In this book the contributors share their perspectives about the past present and future of OR MS theoretical development solution tools modeling approaches and applications Specifically this book collects chapters that offer insights about the following topics Survey articles taking a long view over the past two or more decades to arrive at the present state of the art while outlining ideas for future research Surveys focus on use of a particular OR MS approach e.g. mathematical programming LP MILP etc and solution methods for particular family of application e.g. distribution system design distribution planning system health care Autobiographical or biographical accounts of how particular inventions e.g. Structured Modeling were made These could include personal experiences in early development of OR MS and an overview of what has happened since Development of OR MS mathematical tools e.g. stochastic programming optimization theory Development of OR MS in a particular industry sector such as global supply chain management Modeling systems for OR MS and their development over time as well as

speculation on future development e.g. LINDO LINGO and What's Best New applications of OR/MS models e.g. happiness The target audience of this book is young researchers graduate advanced undergraduate students from OR/MS and related fields like computer science engineering and management as well as practitioners who want to understand how OR/MS modeling came about over the past few decades and what research topics or modeling approaches they could pursue in research or application

Topics in Management Science Robert E. Markland, 1991-01-16 This Third Edition of the popular management science text featuring more concise coverage of topics new case studies for all eighteen chapters and more illustrations tables and diagrams Practical approach teaches students how to use management science techniques in real world situations Contains over 500 problems and 200 discussion questions

Project Scheduling Jan Weglarz, 2012-12-06 Project scheduling problems are generally speaking the problems of allocating scarce resources over time to perform a given set of activities The resources are nothing other than the arbitrary means which activities complete for Also the activities can have a variety of interpretations Thus project scheduling problems appear in a large spectrum of real world situations and in consequence they have been intensively studied for almost forty years Almost a decade has passed since the multi author monograph R Slowinski J Weglarz eds *Advances in Project Scheduling* Elsevier 1989 summarizing the state of the art across project scheduling problems was published Since then considerable progress has been made in all directions of modelling and finding solutions to these problems Thus the proposal by Professor Frederick S Hillier to edit a handbook which reports on the recent advances in the field came at an exceptionally good time and motivated me to accept the challenge Fortunately almost all leading experts in the field have accepted my invitation and presented their completely new advances often combined with expository surveys Thanks to them the handbook stands a good chance of becoming a key reference point on the current state of the art in project scheduling as well as on new directions in the area The contents are divided into four parts The first one dealing with classical models exact algorithms is preceded by a proposition of the classification scheme for scheduling problems
