Cady, 2010 This book takes a unique processor agnostic approach to teaching the core course on microcontrollers or embedded systems taught at most schools of electrical and computer engineering Most books for this course teach students using only one specific microcontroller in the class Cady however studies the common ground between microcontrollers in one volume As there is no other book available to serve this purpose in the classroom readership is broadened to anyone who accepts its pedagogical value not simply those courses that use the same microcontroller Because the text is purposefully processor non specific it can be used with processor specific material such as manufacturer s data sheets and reference manuals or with texts such as Software and Hardware Engineering Motorola M68HC11 or Software and Hardware Engineering Motorola M68HC12 The fundamental operation of standard microcontroller features such as parallel and serial I O interfaces interrupts analog to digital conversion and timers is covered with attention paid to the electrical interfaces needed **Microcomputer Applications in Traffic Engineering Agencies** A. S. Byrne, 1983 This document shows how transportation agencies can take advantage of the microcomputer resolution It provides an introduction to the new microcomputer technology hardware and software and explores the ways in which microcomputers can be used to meet traffic engineering needs It is also intended to help those planning and implementing a microcomputer based information system Cost estimates are provided Seven steps to developing a microcomputer system and described The requirements of a computer consultant systems analyst are discussed
