Microcomputers In Clinical Practice

**Christina J. McClung, John A.
Guerrieri, Kenneth A. McClung**

Microcomputers In Clinical Practice:

Microcomputers in Clinical Practice D. E. Norris, 1985-04-16 An easy to follow non technical introduction to the microcomputer and its various applications to clinical practice this book provides information on everything from purchasing equipment to fundamental programming techniques to essential computer skills all in a self teaching workbook format It also demonstrates how microcomputers can be used to assemble compile store and print such important documents as patient questionnaires physiological records medical history and test analyses and results and to manage bill keeping

Microcomputers in Medicine Philip D. Coleridge-Smith, John H. Scurr, 2012-12-06 This book is based on the proceedings of the fourth Medical Microcomputer Workshop held at the Middlesex Hospital Medical School on 3 5 September 1986 The workshop was attended by clinicians and computer scientists with an interest in applying computer technology to current medical practice The problems ranged from audit and patient management through to the more complex applications of data analysis obtained from current diagnostic techniques The choice of microcomputers has never been greater with low cost making them readily available A single microcomputer has limitations in clinical practice and the use of networks for multi user tasks has expanded its capability but increased the complexity both in terms of hardware and the software needed to run it Although comprehensive commercial packages are available none of these are entirely suitable for medical applications without modification Many of the chapters presented in this book describe the problems encountered and the solutions achieved by configuring and modifying applications software

Medical Applications of Microcomputers Philip D. Coleridge-Smith, John H. Scurr, 2012-12-06 *Medical Applications of Microcomputers* deals with microcomputer applications in a wide area of clinical medicine Recent developments are discussed in several clinical specialties including medicine surgery urology anaesthesia and oncology Topics include the storage of analysis of clinical audit data the display of processing of data from direct physiological measurements and computers in control of therapy The authors draw on their practical experience and knowledge of specific areas to which they have applied modern microcomputer techniques and give detailed descriptions of the means by which the problems that may be encountered may be overcome Those wishing to implement their own computer systems will find this book a useful further source of ideas and techniques which add to those described in the earlier volume *Microcomputers in Medicine* by the same editors

Microcomputers in Medicine Michael J. Geisow, Anthony N. Barrett, 1987

Computer Applications in Clinical Practice Daniel Levinson, 1985

Testing and Assessment in Counseling Practice C. Edward Watkins, Jr., Vicki L. Campbell, 2012-12-06 The primary purpose of this revision remains identical to that of the first edition to show how key personality cognitive behavioral and vocational tests assessment procedures can be used by counselors in their work with clients Too often assessment books only provide the reader with information about tests and assessment procedures They do not however take the next step

showing readers how these tests assessment procedures can be used and integrated into the actual work of counseling This revision is designed to fill that void Chapter authors all of whom are experts in their respective topic areas share the theoretical and research backgrounds about a particular test assessment procedure and then provide a case example or examples to show how assessment data can be meaningfully incorporated into the counseling process

Innovations in Clinical Practice Peter A. Keller, Lawrence G. Ritt, 1982 Abstract This volume of Innovations in clinical practice A 21st century sourcebook is organized into five sections that reflect the diversity of contributions to the series The first section Clinical Issues and Applications deals primarily with therapeutic concerns The various contributions however go beyond traditional therapeutic issues and also address important questions of assessment as well as treatment Issues that relate to a number of different types of clients and situations are covered The second section addresses Practice Management and Professional Development This section is included because of the increasing number of clinicians who work independently and require a source of information on practice management ethical concerns and professional development issues We remain in a period of dramatic changes that affect the nature of our practices New risks as well as opportunities are constantly emerging in this era of health care reform In this section we try to address relevant issues that we believe will be of interest to our readers Some of our discussions here also should be of interest to students and clinicians who practice in organizations or agencies The third section includes Assessment Instruments and Client Handouts The assessment instruments are primarily informal and designed to assist clinicians in collecting information about clients Our goal is to publish screening instruments and forms that aid in the organization of data rather than the making of formal inferences There are some exceptions to this rule however we believe all fall within the bounds of accepted professional practice in the format in which they are presented The materials presented here should be useful to psychologists and other professionals with minimal potential for misuse We assume that readers will be thoroughly familiar with any disorders or processes that they attempt to evaluate and readers are advised to carefully review the introductory materials that accompany contributions to this section We also have included in this section two handouts for use with your clients The fourth section on Community Interventions reflects our view that mental health practitioners have much to offer in the community beyond traditional clinical services We trust that the material in this section will be of assistance to those who are interested in mental health consultation education prevention and expanding their services to reach new and broader populations The fifth section Selected Topics includes a variety of contributions that do not fit neatly into one of the other sections
