**The Economics Anti-Textbook** Rod Hill, Professor Tony Myatt, 2010-03-11 Mainstream textbooks present economics as an objective science free from value judgements that settles disputes by testing hypotheses that applies a pre determined body of principles and contains policy prescriptions supported by a consensus of professional opinion The Economics Anti Textbook argues that this is a myth one which is not only dangerously misleading but also bland and boring It challenges the mainstream textbooks assumptions arguments models and evidence It puts the controversy and excitement back into

economics to reveal a fascinating and a vibrant field of study one which is more an art of persuasion than it is a science The Economics Anti Textbook s chapters parallel the major topics in the typical text beginning with a boiled down account of them before presenting an analysis and critique Drawing on the work of leading economists the Anti Textbook lays bare the blind spots in the texts and their sins of omission and commission It shows where hidden value judgements are made and when contrary evidence is ignored It shows the claims made without any evidence and the alternative theories that aren t mentioned It shows the importance of power social context and legal framework The Economics Anti Textbook is the students guide to decoding the textbooks and shows how real economics is much more interesting than most economists are willing to let on

Very Short Introduction Robert C. Allen,2011-09-15 Why are some countries rich and others poor In 1500 the income differences were small but they have grown dramatically since Columbus reached America Since then the interplay between geography globalization technological change and economic policy has determined the wealth and poverty of nations The industrial revolution was Britain s path breaking response to the challenge of globalization Western Europe and North America joined Britain to form a club of rich nations by pursuing four policies creating a national market by abolishing internal tariffs and investing in transportation erecting an external tariff to protect their fledgling industries from British competition banks to stabilize the currency and mobilize domestic savings for investment and mass education to prepare people for industrial work Together these countries pioneered new technologies that have made them ever richer Before the Industrial Revolution most of the world s manufacturing was done in Asia but industries from Casablanca to Canton were destroyed by western competition in the nineteenth century and Asia was transformed into underdeveloped countries specializing in agriculture The spread of economic development has been slow since modern technology was invented to fit the needs of rich countries and is ill adapted to the economic and geographical conditions of poor countries A few countries Japan Soviet Russia South Korea Taiwan and perhaps China have nonetheless caught up with the West through creative responses to the technological challenge and with Big Push industrialization that has achieved rapid growth through investment coordination Whether other countries can emulate the success of East Asia is a challenge for the future ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every

subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable
