Cartilage Lesions Brian J. Cole, M. Mike Malek, 2013-11-11 Drs Cole and Malek recognized leaders in the field wrote this cutting edge text to fill the void in the literature regarding the management of articular cartilage disease and meniscal deficiency. The book enables orthopedic surgeons to develop an evidence based decision making framework that guides the management of articular cartilage lesions. Carefully chosen contributors provide readers with a practical background in articular lesions, patient assessment and management strategies. Subsequent chapters address the gamut of current surgical techniques from arthroscopy and debridement to unicondylar arthroplasty in a step by step manner. More than 500 detailed illustrations, many in color, help readers understand and master treatments. Case studies which include preoperative planning and postoperative outcomes reinforce the decision making process. Nearly every permutation and treatment option is covered, making this text a prime resource for surgeons committed to exercising sound judgement.

Interfaces in Total Hip Arthroplasty Ian D. Learmouth, 2000 Total hip arthroplasty is carried out to relieve pain and restore function and the implant should outlast the patient. However, failure at one of the interfaces represents the commonest cause of failure of total hip replacement. The durability of the fixation interfaces and the articular interface are therefore critical in determining the long term performance of the implant. This book accesses the opinions of a number of experts in their field on the important issues and factors influencing the component cement and bone cement interface that contribute to durability of fixation in these areas. In addition, they explore how this fixation can be influenced both by the design of the implant, the material properties and the cement. The various material combinations that are available at the articular interface are also presented and the wear properties of and generation of debris from the interfaces are revealed.

Engineered Bone Herve Petite, 2005-08-15 This book addresses relevant issues that tissue engineering researchers must consider when planning new strategies, especially in the bone and cartilage field. It describes transcription factors that are essential in bone development and deals with bone healing.

Bone-Implant Interface in Orthopedic Surgery Theofilos Karachalios, 2013-11-19 Total joint arthroplasty is an effective surgical procedure for end stage osteoarthritis of major joints with satisfactory long term clinical outcome. A large and growing number of arthroplasties are performed annually worldwide and a great number of orthopaedic surgeons are practicing arthroplasty surgery as their main surgical activity. The biological behavior of the bone implant interface is crucial for the long term survival of the artificial joint. All factors which have a positive or negative effect on the interface are of great interest for those practicing arthroplasty surgery. Basic scientists and the industry are continuously searching for new implant fixation mechanisms and improved materials. There is an accumulation of a great amount of basic science data, both biological, material and mechanical, related to the incorporation or loosening of the bone implant interface. However, basic science data does not always translate to satisfactory clinical application and orthopaedic practitioners often wonder which piece of information is clinically useful. A further problem is that basic scientists often speak their own scientific language and may not fully appreciate common clinical practice needs. In this textbook, the biological and

mechanical mechanisms of implant incorporation and loosening will be presented All new data concerning materials and methods for incorporation enhancement will be critically analyzed Data useful for clinical application will be stressed Orthopaedic Surgeons will find information which will improve their clinical practice and basic scientists will be helped to understand and appreciate clinical needs Postgraduate Orthopaedics Paul A.
