Microscopic Life In Your Home:

Never Home Alone Rob Dunn, 2018-11-06 A natural history of the wilderness in our homes from the microbes in our showers to the crickets in our basements Even when the floors are sparkling clean and the house seems silent our domestic domain is wild beyond imagination In *Never Home Alone* biologist Rob Dunn introduces us to the nearly 200 000 species living with us in our own homes from the Egyptian meal moths in our cupboards and camel crickets in our basements to the lactobacillus lounging on our kitchen counters You are not alone Yet as we obsess over sterilizing our homes and separating our spaces from nature we are unwittingly cultivating an entirely new playground for evolution These changes are reshaping the organisms that live with us prompting some to become more dangerous while undermining those species that benefit our bodies or help us keep more threatening organisms at bay No one who reads this engrossing revelatory book will look at their homes in the same way again
