Climate Intervention discusses albedo modification changing the fraction of incoming solar radiation that reaches the surface. This approach would deliberately modify the energy budget of Earth to produce a cooling designed to compensate for some of the effects of warming associated with greenhouse gas increases. The prospect of large scale albedo modification raises political and governance issues at national and global levels as well as ethical concerns. Climate Intervention Reflecting Sunlight to Cool Earth discusses some of the social, political, and legal issues surrounding these proposed techniques. It is far easier to modify Earth's albedo than to determine whether it should be done or what the consequences might be of such an action. One serious concern is that such an action could be unilaterally undertaken by a small nation or smaller entity for its own benefit without international sanction and regardless of international consequences. Transparency in discussing this subject is critical. In the spirit of that transparency, Climate Intervention Reflecting Sunlight to Cool Earth was based on peer reviewed literature and the judgments of the authoring committee; no new research was done as part of this study and all data and information used are from entirely open sources. By helping to bring light to this topic area, this book will help leaders to be far more knowledgeable about the consequences of albedo modification approaches before they face a decision whether or not to use them.

Setting Course Craig Schultz, 1994

Pain Management and the Opioid Epidemic National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Pain Management and Regulatory Strategies to Address Prescription Opioid Abuse, 2017-10-28. Drug overdose driven largely by overdose related to the use of opioids is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

New Challenges, New Tools for Defense Decisionmaking Stuart E. Johnson, Martin C. Libicki, Gregory F. Treverton, 2003-03-31. It is still easy to underestimate how much the collapse of the Soviet Union and the end of the Cold War and then the terrorist attacks of September 11, 2001 transformed the task of American foreign and defense policymaking. In place of predictability, if a sometimes terrifying predictability, the world is now very unpredictable. In place of a single overriding threat and benchmark by which all else could be measured, a number of possible threats have arisen, not all of them states. In place of force on force engagements, U.S. defense planners have to assume asymmetric threats, ways not to

defeat U S power but to render it irrelevant This book frames the challenges for defense policy that the transformed world engenders and it sketches new tools for dealing with those challenges from new techniques in modeling and gaming to planning based on capabilities rather than threats to personnel planning and making use of best practices from the private sector

Sustainability and the U.S. EPA National Research Council,Policy and Global Affairs,Science and Technology for Sustainability Program,Committee on Incorporating Sustainability in the U.S. Environmental Protection

Agency,2011-09-08 Sustainability is based on a simple and long recognized factual premise Everything that humans require for their survival and well being depends directly or indirectly on the natural environment The environment provides the air we breathe the water we drink and the food we eat Recognizing the importance of sustainability to its work the U S

Environmental Protection Agency EPA has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision making at the agency To further strengthen the scientific basis for sustainability as it applies to human health and environmental protection the EPA asked the National Research Council NRC to provide a framework for incorporating sustainability into the EPA s principles and decision making This framework Sustainability and the U S EPA provides recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s Although risk based methods have led to many successes and remain important tools the report concludes that they are not adequate to address many of the complex problems that put current and future generations at risk such as depletion of natural resources climate change and loss of biodiversity Moreover sophisticated tools are increasingly available to address cross cutting complex and challenging issues that go beyond risk management The report recommends that EPA formally adopt as its sustainability paradigm the widely used three pillars approach which means considering the environmental social and economic impacts of an action or decision Health should be expressly included in the social pillar EPA should also articulate its vision for sustainability and develop a set of sustainability principles that would underlie all agency policies and programs
