**Taking Power** John Foran, 2005-11-17 Taking Power analyzes the causes behind some three dozen revolutions in the Third World between 1910 and the present. It advances a theory that seeks to integrate the political, economic and cultural factors that brought these revolutions about and links structural theorizing with original ideas on culture and agency. It attempts to explain why so few revolutions have succeeded while so many have failed. The book is divided into chapters that treat particular sets of revolutions including the great social revolutions of Mexico 1910, China 1949, Cuba 1959, Iran 1979 and Nicaragua 1979, the anticolonial revolutions in Algeria, Vietnam, Angola, Mozambique and Zimbabwe from the 1940s to the 1970s, and the failed revolutionary attempts in El Salvador, Peru and elsewhere. It closes with speculation about the future of revolutions in an age of globalization with special attention to Chiapas, the post-September 11 world and the global justice movement.

**Embedded Security in Cars** Kerstin Lemke, Christof Paar, Marko Wolf, 2006-03-28 Most innovations in the car industry are based on software and electronics and IT will soon constitute the major production cost factor. It seems almost certain that embedded IT security will be crucial for the next generation of applications. Yet whereas software safety has become a relatively well established field, the protection of automotive IT systems against manipulation or intrusion has only recently started to emerge. Lemke, Paar and Wolf collect in this volume a state of the art overview on all aspects relevant for IT security in automotive applications. After an introductory chapter written by the editors themselves, the contributions from experienced experts of different disciplines are structured into three parts. Security in the Automotive Domain describes applications for which IT security is crucial, like immobilizers, tachographs and software updates. Embedded Security Technologies details security technologies relevant for automotive applications, e.g. symmetric and asymmetric cryptography and wireless security. Business Aspects of IT Systems in Cars shows the need for embedded security in novel applications like location based navigation systems and personalization. The first book in this area of fast growing economic and scientific importance, it is indispensable for both researchers in software or embedded security and professionals in the automotive industry.

*The Euro, Inflation and Consumers' Perceptions* Paolo Giovane, Roberto Sabbatini, 2008-04-16 On 1 January 2002 euro banknotes and coins were introduced in twelve EU Member States. Three more countries joined in the following years and over 300 million people now use the euro in their daily transactions. The currency

changeover was a technical success From the very start however the vast majority of euro area citizens held the single currency responsible for a sharp rise in prices and a subsequent decline in their personal economic fortunes This book puts forward convincing empirical evidence primarily drawn from Italy s experience to establish whether the introduction of the euro has had a major impact on prices and if not why so many people believe it has Its significance lies not only in the documentation of a historic event but also and more importantly in the lessons it provides which concern the public s understanding of inflation the correct assessment of the effects of the single currency and the need for appropriate measures when other countries adopt the euro
