Flowing matter is a subject at the crossroads between physics, mathematics, chemistry, engineering, biology and earth sciences and relies on a multidisciplinary approach to describe the emergence of the macroscopic behaviours in a system from the coordinated dynamics of its microscopic constituents. Depending on the microscopic interactions, an assembly of molecules or of mesoscopic particles can flow like a simple Newtonian fluid, deform elastically like a solid or behave in a complex manner. When the internal constituents are active as for biological entities, one generally observes complex large scale collective motions. Phenomenology is further complicated by the invariable tendency of fluids to display chaos at the large scales or when stirred strongly enough. This volume presents several research topics that address these phenomena encompassing the traditional micro, meso and macro scales descriptions and contributes to our understanding of the fundamentals of flowing matter. This book is the legacy of the COST Action MP1305 Flowing Matter. *Michelin the World* Michelin, Michelin Travel Publications, 2002-12 *Data Mining: Concepts and Techniques* Jiawei Han, Micheline Kamber, Jian Pei, 2011-06-09 Data Mining Concepts and Techniques provides the concepts and techniques in processing gathered data or information which will be used in various applications.
