,1971 **Microbes and Biological Productivity** ,1971 Primary Productivity and Biogeochemical Cycles in the Sea Paul G. Falkowski, Avril D. Woodhead, 2013-11-22 Biological processes in the oceans play a crucial role in regulating the fluxes of many important elements such as carbon nitrogen sulfur oxygen phosphorus and silicon As we come to the end of the 20th century oceanographers have increasingly focussed on how these elements are cycled within the ocean the interdependencies of these cycles and the effect of the cycle on the composition of the earth's atmosphere and climate Many techniques and tools have been developed or adapted over the past decade to help in this effort These include satellite sensors of upper ocean phytoplankton distributions flow cytometry molecular biological probes sophisticated moored and shipboard instrumentation and vastly increased numerical modeling capabilities This volume is the result of the 37th Brookhaven Symposium in Biology in which a wide spectrum of oceanographers chemists biologists and modelers discussed the progress in understanding the role of primary producers in biogeochemical cycles The symposium is dedicated to Dr Richard W Eppley an intellectual giant in biological oceanography who inspired a generation of scientists to delve into problems of understanding biogeochemical cycles in the sea We gratefully acknowledge support from the U S Department of
