Coping with Biological Growth on Stone Heritage Objects Daniela Pinna,2017-05-18

Coping with Biological Growth on Stone Heritage Objects Methods Products Applications and Perspectives offers hands on guidance for addressing the specific challenges involved in conserving historical monuments sculptures archaeological sites and caves that have been attacked and colonized by micro and macroorganisms The volume provides many case studies of removal of biological growth with practical advice for making the right choices It presents detailed and updated information related to biocides and to alternative substances features that will be valuable to dealing with these challenges The author's goal is to provide access to information and offer the conceptual framework needed to understand complex issues so that the

reader can comprehend the nature of conservation problems and formulate her his own views From bacteria to plants biological agents pose serious risks to the preservation of cultural heritage In an effort to save heritage objects buildings and sites conservators activities aim to arrest mitigate and prevent the damages caused by bacteria algae fungi lichens plants and birds Although much has been learned about these problems information is scattered across meeting proceedings and assorted journals that often are not available to restorers and conservators This book fills the gap by providing a comprehensive selection and examination of international papers published in the last fifteen years focusing on the appropriate methods techniques and products that are useful for the prevention and removal of micro and macroorganisms that grow on artificial and natural stone works of art including wall paintings Results on new substances with antimicrobial properties and alternative methods for the control of biological growth are presented as well The book also emphasize issues on bioreceptivity of stones and the factors influencing biological growth and includes an outline of the various organisms able to develop on stones a discussion on the bioprotection of stones by biofilms and lichens a review of the main analytical techniques and a section on bioremediation This volume will be a valuable reference for cultural heritage conservators and restorers scientists and heritage site staff involved in conservation and maintenance of buildings archaeological sites parks and caves

Laser Optofluidics in Fighting Multiple Drug Resistance Mihail Lucian Pascu, 2017-07-07 This monograph is a collection of reviews that presents results obtained from new and somewhat unconventional methods used to fight multiple drug resistance MDR acquired by microorganisms and tumours Two directions are considered i the modification of non antibiotic medicines by exposure to un coherent or laser optical radiation to obtain photoproducts that receive bactericidal or possibly tumouricidal properties and ii the development of new vectors micrometric droplets of solutions containing medicinal agents to transport medicines to targets based on optical and micro spectroscopic methods Chapters shed light on pendant droplets used for antibiotic drug delivery the science of lasers and their interactions with fluids in pendant droplets and spectroscopic analyses of droplets used to treat MDR infections It therefore equips researchers and medical professionals with information about tools that enable them to respond to medical emergencies in challenging environments The intended readership for this monograph includes graduate students medical doctors fluid physicists biologists photochemists and experts in drug delivery methods employed in extreme conditions such as those found in outer space and hypergravity conditions who are learning about using techniques such as laser spectroscopy biophotonics and optofluidics microfluidics
