The Cambridge History of Science: Volume 6, The Modern Biological and Earth Sciences David C. Lindberg, Peter J. Bowler, Ronald L. Numbers, Roy Porter, 2003 This book in the highly respected Cambridge History of Science series is devoted to the history of the life and earth sciences since 1800 It provides comprehensive and authoritative surveys of historical thinking on major developments in these areas of science on the social and cultural milieus in which the knowledge was generated and on the wider impact of the major theoretical and practical innovations The articles are written by acknowledged experts who provide concise accounts of the latest historical thinking coupled with guides to the most important recent literature In addition to histories of traditional sciences the book covers the emergence of newer disciplines such as genetics biochemistry and geophysics The interaction of scientific techniques with their practical applications in areas such as medicine is a major focus of the book as is its coverage of controversial areas such as science and religion and environmentalism

Sparks of Life James E. Strick, Professor in the Dept of Earth and Environment and Chair of the Program in Science Technology and Society James E Strick, PhD, 2009-06-01 How asks James E Strick could spontaneous generation the idea that living things can suddenly arise from nonliving materials come to take root for a time even a brief one in so thoroughly unsuitable a field as British natural theology No less an authority than Aristotle claimed that cases of spontaneous generation were to be observed in nature and the idea held sway for centuries Beginning around the time of the Scientific Revolution however the doctrine was increasingly challenged attempts to prove or disprove it led to important breakthroughs in experimental design and laboratory techniques most notably sterilization methods that became the cornerstones of modern microbiology and sped the ascendancy of the germ theory of disease The Victorian debates Strick shows were entwined with the public controversy over Darwin's theory of evolution While other histories of the debates between 1860 and 1880 have focused largely on the experiments of John Tyndall Henry Charlton Bastian and others Sparks of Life emphasizes previously understudied changes in the theories that underlay the debates Strick argues that the disputes cannot be understood without full knowledge of the factional infighting among Darwinians themselves as they struggled to create a socially and scientifically viable form of Darwinian science He shows that even the terms of the debate such as biogenesis usually but incorrectly attributed to Huxley were intensely contested

Victorian Cultures of Liminality Amina Alyal, Susan Anderson, 2018-07-27 This volume is unique in its focus on cross fertilisation in the arts on very specific exploration of liminal spaces and on the representation of marginal figures in writing The essays here grew out of the Borders and Margins colloquium held at Leeds Trinity University UK in April 2010 which was the fourth in a series of colloquia This collection moreover contributes to a growing area of scholarship which explores Anglo French interactions and

exchanges In choosing the term liminality the editors are aware of its nuanced implications allowing suggestions both of the initial and the transitional The contributors here are academics from the fields of literature history and art history and their essays cover art history literature cultural history the arts and faith Altogether this collection evokes a sense of temporal shift in that changes in values and focus are uncovered as the nineteenth century progresses Some have an ekphrastic quality showing how pictures can have a narrative and how pictures as well as texts can be encoded with moral and social interpretations Close scrutiny is applied to different kinds of texts fiction and non fiction and the purposes for which they were produced This book will appeal to scholars and academics interested in a wide range of cross categorisational transactions in nineteenth century Britain It will be of interest to scholars of Victorian culture and English nineteenth century literature and art particularly in terms of genre as well as to academics interested in the development of social personal and national identities

A History of Medicine Lois N. Magner,1992-03-17 A non technical jargon free presentation of the history of medicine from palaeopathology to recent theories and practices of modern medicine It gives a wide ranging

overview of Western medicine and an introduction to the rich and varied medical traditions of the Near and Far East This text stresses the major themes in the history of medicine placing the modern experience within the framework of historical issues and it presents medical history as an important part of intellectual and social history supplying students with an examination of the field that encourages them to question modern medical assumptions Areas that are less familiar to students are highlighted and case histories represent broader issues and trends

Evolution and the Spontaneous Generation Debate H. Charlton Bastian, 2001-04-15 Carefully selected by James Strick this comprehensive collection of primary source materials resurrects the forgotten man of evolutionary theory Henry Charlton Bastian and opens a new window on controversies which divided the ranks of evolutionary naturalists The hostile reaction of Thomas Henry Huxley and his allies to Bastian's challenge that they accept the theory of spontaneous generation and the materialism connected with it shows just how far they were willing to go to sanitize evolutionary theory for public consumption while maintaining their own respectability Strick's collection is a vivid reminder of the volatile politics of evolution and the importance of not losing sight of the losers in scientific controversy Bernard Lightman Strick garners all the backbiting documents to show how crucial aspects of the Darwinian orthodoxy were made The knock down fight in the 1870s between Huxley and Tyndall and the brilliant pathology professor Henry Bastian was over the inclusion of spontaneous generation Bastian's initial success in justifying it and picking up rival medical support reveals that Huxley's evolutionary view was not an inevitable outcome The sparring in Strick's volumes proves that it took all of Huxley's and Tyndall's scientific rhetorical and darker skills to establish their version of Darwinism Adrian Desmond An invaluable resource for the understanding of the controversies on the origin of life on earth Dr Iris Fry Everybody knows that life's creation was the last redoubt of natural theology in the nineteenth century and spontaneous generation the atheists siege weapon for destroying it Strick's authoritative collection breaks new ground by showing how unbelievers themselves came to blows over the origin of life even Darwin's followers Their contest for the Victorian moral heights is a case study of the politics of science and a timely reminder that arguments among public scientists are never simply about the facts Dr James Moore Evolution and the Spontaneous Generation Debate collects the rare primary works on the origin of life by Henry Charlton Bastian 1837-1915 one of the brightest young rising Darwinian stars of the time It contains all Bastian's key works on this subject from his very first in 1871 The Modes of Origin of Lowest Organisms through to one of his last The Evolution of Life in 1907 The set also includes contemporary reviews and responses to Bastian's work which illustrate how emotive this theory was during the 1870s and why the likes of T H Huxley and John Tyndall went to extraordinarily great lengths to oppose Bastian In the first two decades after the publication of Darwin's On the Origin of Species 1859 a lively often heated debate broke out about what the implications of Darwin's theory were for understanding the origin of life from non living matter Nowhere was the debate more acrimonious than among the Darwinians themselves The response to Bastian's work was uniformly negative in Christian religious circles and created a

tremendous response both negative and positive from the Darwinians One faction including medical doctors and scientific journals strongly supported Bastian s ideas another including Huxley Tyndall and the powerful X Club fiercely attacked Bastian eventually declaring him vanquished by 1878 This set contains examples of both reactions including Huxley s famous Biogenesis and Abiogenesis address This set is crucial to understanding the genesis of today s ideas about the origin of life Much of the broad outlines of modern Darwinian ideas took shape in the debate over Bastian s work and have remained with us since Featuring an introduction by James Strick Assistant Professor of Biology and Society Arizona State University Evolution and the Spontaneous Generation Debate will amply reward study by scientists physicians historians of science and all in the modern scientific world who wish to better understand public controversy in science contains important writings by nineteenth century scientists on the spontaneous generation debate important case study of a Victorian debate on evolution crucial to understanding the development of the origin of life theory in the nineteenth century Encyclopedia of Microbiology Thomas M.
