Decision Support Systems Henk G. Sol, Cees A.Th. Takkenberg, Pieter F. de Vries Robbé, 2013-11-11 In 1985 it was 20 years
since Nobel Laureate Herbert A Simon published THE SHAPE OF AUTOMATION For Men and Management This short but
important and still topical book dwells on three subjects The Long Range Economic Effects of Automation Will the
Corporation be Managed by Machines The New Science of Management Decision In contrast with George Orwell who was a
critic of contemporary political systems rather than a prophet Simon portrays a far more rosy picture of our brave new world
Simon s work breathes optimism First computer technology looking back it is aoubtful whether even the professor expected
the hardware development e have wittnessed Secondly our ability to tame the beast there is now not much reason for
complacency and satisfaction Offices and factories can by no means be called automated at most semi automated Thirdly the
organizational and social implications of these rapid technological developments referring to what he then called The
Computer and the new decision making techniques Concerning this last point there is little need to emphasize that had been
less practical application in organizations than the often impressive theoretical developments would lead one to believe In
Europe this situation is even more accute than in the USA and Japan The ESPRIT programme of the ECC and many similar
national programs intend to bridge the gap **Encyclopedia of Computer Science and Technology** Allen Kent, James G.
