## **Microcomputer Methods For Social Scientists:**

**Microcomputer Methods for Social Scientists** Philip A. Schrodt, 1987      Using Microcomputers in Research Thomas W. Madron, C. Neal Tate, Robert G. Brookshire, 1985-05-01 Using Microcomputers in Research may be used in conjunction with the earlier Microcomputer Methods for Social Scientists QASS 40 together they provide a lucid and comprehensive introduction to microcomputing in the social sciences This book is organized around the research process taking the reader through the processes of writing the research proposal gathering data analysing and manipulating data and writing the research report      **Computer Applications in the Social Sciences** Edward E. Brent, Ronald E. Anderson, 1990 Presenting an introduction to computing and advice on computer applications this book examines hardware and software with respect to the needs of the social scientist It offers a framework for the use of computers with focus on the work station the center of which is a personal computer connected to networks by a telephone based modem      *A Research Primer for the Social and Behavioral Sciences* Miriam Schapiro Grosz, Hyman Sardy, 2014-05-10 A Research Primer for the Social and Behavioral Sciences provides an introductory but comprehensive overview of the research process that primarily concerns human subjects This book discusses the methods of acquiring knowledge importance of a well chosen problem review of the literature and relationship between theory building and hypothesis testing The common sources of invalidity in practice non experimental research types Stevens classification of scales and estimation based on probabilistic sampling are also elaborated This text likewise covers the role of computer in research techniques for analysis of data univariate and bivariate statistics and assumptions underlying analysis of variance Other topics include the canonical correlation analysis non parametric analysis of variance deterministic problem analysis techniques and common errors in presentation of findings This publication is intended for novice investigators in the broad category of social and behavioral sciences      New Technology in Sociology Grant Blank, James L. McCartney, Edward Brent, 2019-12-06 When technology has been applied in business environments its justification has usually been cast in terms of saving time or saving money In the social sciences the justification must be different the viability of sociology as a profession for example will not be enhanced by cost reductions The focus in this volume is on a different bottom line      *Microcomputer Applications in Qualitative Research* Bryan Pfaffenberger, 1988-10 Microcomputer Applications in Qualitative Research critically surveys the many ways microcomputers and programmes can be used to further qualitative social research The author focuses on the liabilities and benefits of using this technology for research purposes and provides a generic conceptual approach rather than a how to guide to specific computers and programmes Underlying every chapter is the conviction that microcomputer technology can only be useful in qualitative studies if its limitations including its potentially negative or constraining impact are kept in mind The impact of microcomputer technology on qualitative research is considered in its relation to society as a whole      Handbook of Emergent Methods Sharlene Nagy Hesse-Biber, Patricia Leavy, 2013-10-15 Social researchers increasingly find themselves

looking beyond conventional methods to address complex research questions This is the first book to comprehensively examine emergent qualitative and quantitative theories and methods across the social and behavioral sciences Providing scholars and students with a way to retool their research choices the volume presents cutting edge approaches to data collection analysis and representation Leading researchers describe alternative uses of traditional quantitative and qualitative tools innovative hybrid or mixed methods and new techniques facilitated by technological advances Consistently formatted chapters explore the strengths and limitations of each method for studying different types of research questions and offer practical in depth examples

*Assessing Inequality* Lingxin Hao, Daniel Q. Naiman, 2010-05-26 Providing basic foundations for measuring inequality from the perspective of distributional properties This monograph reviews a set of widely used summary inequality measures and the lesser known relative distribution method provides the basic rationale behind each measure and discusses their interconnections It also introduces model based decomposition of inequality over time using quantile regression This approach enables researchers to estimate two different contributions to changes in inequality between two time points

**Key Features** Clear statistical explanations provide fundamental statistical basis for understanding the new modeling framework Straightforward empirical examples reinforce statistical knowledge and ready to use procedures Multiple approaches to assessing inequality are introduced by starting with the basic distributional property and providing connections among approaches This supplementary text is appropriate for any graduate level intermediate or advanced statistics course across the social and behavioral sciences as well as individual researchers

**Factorial Survey Experiments** Katrin Auspurg, Thomas Hinz, 2014-11-28 Filling a gap in the literature of the field Factorial Survey Experiments provides researchers with a practical guide to using the factorial survey method to assess respondents beliefs about the world judgment principles or decision rules through multi dimensional stimuli vignettes that resemble real life decision making situations Using insightful examples to illustrate their arguments authors Katrin Auspurg and Thomas Hinz guide researchers through all relevant steps including how to set up the factorial experimental design drawing samples of vignettes and respondents how to handle the practical challenges that must be mastered when an experimental plan with many different treatments is embedded in a survey format and how to deal with questions of data analysis In addition to providing the how tos of designing factorial survey experiments the authors cover recent developments of similar methods such as conjoint analyses choice experiments and more advanced statistical tools

Differential Item Functioning Steven J. Osterlind, Howard T. Everson, 2009-09-30 Differential Item Functioning Second Edition is a revision of the 1983 title Test Item Bias In the past 23 years differential item performance has assumed a level of attention unimagined in the early 1980s Then only a few tests and assessment programs attended to item bias while doing so is now a mandatory step in any responsible assessment program Also technical advances such as the widespread use of item response theory have pushed the field of differential performance to levels of technical sophistication far beyond what was practiced years ago This new

edition presents an up to date description of DIF describes varying procedures for addressing DIF in practical testing contexts presents useful examples and studies of DIF that readers may employ as a guide in their own DIF work and briefly describes relevant features of major statistical packages that can be employed in DIF analysis e g SPSS SAS M Minitab and Systat This text is ideal for the measurement professional or advanced student who deals with educational or psychological assessment Readers need only have a preliminary background in tests and measurement including some beginning statistics and elementary algebra in order to find this volume useful

#### **Event History and Survival Analysis**

Paul D. Allison, 2014-02-19 Social scientists are interested in events and their causes Although event histories are ideal for studying the causes of events they typically possess two features censoring and time varying explanatory variables that create major problems for standard statistical procedures Several innovative approaches have been developed to accommodate these two peculiarities of event history data This volume surveys these methods concentrating on the approaches that are most useful to the social sciences In particular Paul D Allison focuses on regression methods in which the occurrence of events is dependent on one or more explanatory variables He gives attention to the statistical models that form the basis of event history analysis and also to practical concerns such as data management cost and useful computer software The Second Edition is part of SAGE's Quantitative Applications in the Social Sciences QASS series which continues to serve countless students instructors and researchers in learning the most cutting edge quantitative techniques

**Multivariate General Linear Models** Richard F. Haase, 2011-11-23 This title provides an integrated introduction to multivariate multiple regression analysis MMR and multivariate analysis of variance MANOVA It defines the key steps in analyzing linear model data and introduces multivariate linear model analysis as a generalization of the univariate model Richard F Haase focuses on multivariate measures of association for four common multivariate test statistics presents a flexible method for testing hypotheses on models and emphasizes the multivariate procedures attributable to Wilks Pillai Hotelling and Roy

**Regression Diagnostics** John Fox, 2019-12-09 Regression diagnostics are methods for determining whether a regression model that has been fit to data adequately represents the structure of the data For example if the model assumes a linear straight line relationship between the response and an explanatory variable is the assumption of linearity warranted Regression diagnostics not only reveal deficiencies in a regression model that has been fit to data but in many instances may suggest how the model can be improved The Second Edition of this bestselling volume by John Fox considers two important classes of regression models the normal linear regression model LM in which the response variable is quantitative and assumed to have a normal distribution conditional on the values of the explanatory variables and generalized linear models GLMs in which the conditional distribution of the response variable is a member of an exponential family R code and data sets for examples within the text can be found on an accompanying website

**Analyzing Textual Information** Johannes Ledolter, Lea S. VanderVelde, 2021-05-05 Researchers in the social sciences and beyond are dealing more and more with

massive quantities of text data requiring analysis from historical letters to the constant stream of content in social media Traditional texts on statistical analysis have focused on numbers but this book will provide a practical introduction to the quantitative analysis of textual data Using up to date R methods this book will take readers through the text analysis process from text mining and pre processing the text to final analysis It includes two major case studies using historical and more contemporary text data to demonstrate the practical applications of these methods Currently there is no introductory how to book on textual data analysis with R that is up to date and applicable across the social sciences Code and a variety of additional resources to enrich the use of this book are available on an accompanying website These resources include data files from the 39th Congress and also the collection of tweets of President Trump now no longer available to researchers via Twitter itself

**Time Series Analysis** Charles W. Ostrom,1990 The text gives a good basis for understanding the ideas of the time series models and estimation without overwhelming readers with the complexity of the subject Journal of the American Statistical Association Completely revised and updated this second edition of Time Series Analysis examines techniques for the study of change based on regression analysis Ostrom demonstrates how these regression techniques may be employed for hypothesis testing estimating and forecasting In addition analysis strategies for both lagged and nonlagged models are presented and alternative time dependent processes are explored

**Introduction to Applied Demography** Norfleet W. Rives,William J. Serow,1984-07 Identifies kinds and sources of demographic data and then explains how to use this information to determine demographic trends and their consequences

**Typologies and Taxonomies** Kenneth D. Bailey,1994-06-13 How do we group different subjects on a variety of variables Should we use a classification procedure in which only the concepts are classified typology one in which only empirical entities are classified taxonomy or some combination of both In this clearly written book Bailey addresses these questions and shows how classification methods can be used to improve research Beginning with an exploration of the advantages and disadvantages of classification procedures including those typologies that can be constructed without the use of a computer the book covers such topics as clustering procedures including agglomerative and divisive methods the relationship among various classification techniques including the relationship of monothetic qualitative typologies to polythetic quantitative taxonomies a comparison of clustering methods and how these methods compare with related statistical techniques such as factor analysis multidimensional scaling and systems analysis and lists classification resources This volume also discusses software packages for use in clustering techniques

**Agent-Based Models** Nigel Gilbert,2008 Aimed at readers with minimal experience in computer programming this brief book provides a theoretical and methodological rationale for using ABM in the social sciences It goes on to describe some carefully chosen examples from different disciplines illustrating different approaches to ABM It concludes with practical advice about how to design and create ABM a discussion of validation procedures and some guidelines about publishing articles based on ABM

**Understanding Correlation Matrices** Alexandria Hadd,Joseph Lee

Rodgers,2020-11-29 Correlation matrices along with their unstandardized counterparts covariance matrices underlie the majority the statistical methods that researchers use today A correlation matrix is more than a matrix filled with correlation coefficients The value of one correlation in the matrix puts constraints on the values of the others and the multivariate implications of this statement is a major theme of the volume Alexandria Hadd and Joseph Lee Rodgers cover many features of correlations matrices including statistical hypothesis tests their role in factor analysis and structural equation modeling and graphical approaches They illustrate the discussion with a wide range of lively examples including correlations between intelligence measured at different ages through adolescence correlations between country characteristics such as public health expenditures health life expectancy and adult mortality correlations between well being and state level vital statistics correlations between the racial composition of cities and professional sports teams and correlations between childbearing intentions and childbearing outcomes over the reproductive life course This volume may be used effectively across a number of disciplines in both undergraduate and graduate statistics classrooms and also in the research laboratory

**Logistic Regression** Fred C. Pampel,2020-09-09 This volume helps readers understand the intuitive logic behind logistic regression through nontechnical language and simple examples The Second Edition presents results from several statistical packages to help interpret the meaning of logistic regression coefficients presents more detail on variations in logistic regression for multicategory outcomes and describes some potential problems in interpreting logistic regression coefficients A companion website includes the three data sets and Stata SPSS and R commands needed to reproduce all the tables and figures in the book Finally the Appendix reviews the meaning of logarithms and helps readers understand the use of logarithms in logistic regression as well as in other types of models
