Chapter 5: Price Controls and Market Efficiency

I) Government-controlled prices

The government controls the price of products in the domestic markets for numerous reasons. **Government price controls** are policies that attempt to hold the price at some **disequilibrium value** (below or above the equilibrium value) thus creating a shortage or surplus.

- **Disequilibrium Prices:** at any disequilibrium price, the quantity exchanged is determined by the lesser quantity demanded and quantity supplied.

for any prices below p_0 , $Q_{\text{exchanged}}$ is determined by the supply curve. For any prices above p_0 , $Q_{\text{exchanged}}$ is determined by the demand curve
in any **voluntary** market transaction, it requires both a willing buyer and seller

- **Price Floors:** Govs establish **price floors** (=minimum permissible price that can be charged for a particular good or service). If the price floor is at or below the Equilibrium, then it has no impact because it is attainable. If it is above the equilibrium, it will raise prices, it is **binding**.
□ Binding price floors lead to excess supply. Either an unsold surplus exists, or the government must enter the market and buy the excess supply with taxes (angry consumers that pay taxes) or angry people searching for jobs (shortage) especially low skilled

The consequences of excess supply differ:

If it is labor service, and minimum wages, then it leads to unemployment
If it is a product, the surplus is bought by the gov and accumulated in its warehouses

The gov implements this policy because people selling may be better off with the new equilibrium because

- **Price Ceilings:** the maximum price at which certain goods and services may be legally exchanged (ex: gas, electricity, oil, rental housing...). If the price ceiling is above the Equilibrium, it has no effect because the free-market equilibrium remains attainable. However, if the price ceiling is below the equilibrium price, it will lower prices, it is **binding**.
□ Binding price ceilings lead to excess demand. The quantity exchanged will be less than in the free-market equilibrium
