Microelectronic Systems 1 Checkbook R E Vears, 2013-10-22 Microelectronic Systems 1 Checkbook provides coverage of the Business and Technician Education Council level 1 unit in Microelectronic Systems. However, it can be regarded as a basic textbook in microelectronic systems for a much wider range of studies. Each topic considered in the text is presented in a way that assumes the reader has little prior knowledge of electronics. The aim of the book is to provide an introduction to the concept of systems to differentiate analogue and digital systems and to describe the nature of microprocessor controlled systems. An introduction to programming is provided in Chapter 6 in which simple programs are described. To enable practical experience to be gained, listings are provided for these programs to run on four different microprocessor systems. The four microprocessors chosen are the MOS 6502, Motorola 6800, National Semiconductors INS 8060 and RCA 1802. This book is designed for students seeking technician or equivalent qualification through the courses of the Business and Technician Education Council, BTEC, Scottish Technical Education Council, Australian Technical and Further Education Departments, East and West African Examinations Council and other comparable examining authorities in technical subjects.

Microelectronic Systems N3 Checkbook R E Vears, 2014-05-12 Microelectronic Systems N3 Checkbook Level 3 provides further coverage of the Business and Technician Education Council BTEC unit in Microelectronic Systems N syllabus U86 333 and aims to extend the range of hardware, software and interfacing techniques developed at level NII. The book takes a look at microcomputer bus systems, interrupts and logic families. Discussions focus on further and worked problems on logic families, worked problems on interrupts and microcomputer bus systems and main points concerned with microcomputer bus systems. The text then ponders on semiconductor memories and interfacing devices. Topics include worked problems on interfacing devices, main points concerned with interfacing devices and semiconductor memories and further problems on semiconductor memories. The text reviews signal degradation and assembly language problems including main points concerned with signal degradation and assembly language programs and worked problems on assembly language programs and signal degradation. The book is a valuable source of data for researchers interested in microelectronic systems.

Microelectronic Systems 3 Checkbook R E Vears, 2013-10-22 Microelectronic Systems 3 Checkbook aims to extend the range of hardware, software and interfacing techniques developed at level 2. This book concentrates on the highly popular 6502 Z80 and 6800 microprocessors and contains approximately 70 tested programs that may be used with little or no modification on most systems based on these microprocessors. This text also covers the main points concerned with computer hardware configuration, interfacing devices, subroutines and the stack, polling and interrupts, microelectronic stores and address decoding and organization. Each chapter of the book contains worked problems for the respective topics. Microprocessor instruction sets for MS6502 Z80 and MC6800 are provided in the Appendix. Students taking Microelectronic Systems courses will find this book invaluable.
