**Introduction to Microfabrication** Sami Franssila,2005-01-28 Microfabrication is the key technology behind integrated circuits microsensors photonic crystals ink jet printers solar cells and flat panel displays Microsystems can be complex but the basic microstructures and processes of microfabrication are fairly simple Introduction to Microfabrication shows how the common microfabrication concepts can be applied over and over again to create devices with a wide variety of structures and functions Featuring A comprehensive presentation of basic fabrication processes An emphasis on materials and microstructures rather than device physics In depth discussion on process integration showing how processes materials and devices interact A wealth of examples of both conceptual and real devices Introduction to Microfabrication includes 250 homework problems for students to familiarise themselves with micro scale materials dimensions measurements costs and scaling trends Both research and manufacturing topics are covered with an emphasis on silicon which is the workhorse of microfabrication This book will serve as an excellent first text for electrical engineers chemists physicists and materials scientists who wish to learn about microstructures and microfabrication techniques whether in MEMS microelectronics or emerging applications      **Micromachining and Microfabrication Process Technology XVIII.** ,2013

*Microfabrication and Nanomanufacturing* Mark J. Jackson,2005-11-10 Nanotechnology seen as the next leap forward in the industrial revolution requires that manufacturers develop processes that revolutionize the way small products are made Microfabrication and Nanomanufacturing focuses on the technology of fabrication and manufacturing of engineering materials at these levels The book provides an overview of techniques used in the semiconductor industry It also discusses scaling and manufacturing processes operating at the nanoscale for non semiconductor applications the construction of nanoscale components using established lithographic techniques bulk and surface micromachining techniques used for etching machining and molding procedures and manufacturing techniques such as injection molding and hot embossing This authoritative compilation describes non traditional micro and nanoscale processing that uses a newly developed technique called pulsed water jet machining as well as the efficient removal of materials using optical energy Additional chapters focus on the development of nanoscale processes for producing products other than semiconductors the use of abrasive particles embedded in porous tools and the deposition and application of nanocrystalline diamond Economic factors are also presented and concern the promotion and commercialization of micro and nanoscale products and how demand will eventually drive the
