On the Development of China's Information Technology Industry Jiang Zemin,2009-11-13 In the early 1980 s Jiang Zemin then Minister of Electronics Ministry of China assessed the IT industry as the strategic high ground in international competition He perceived the discrepancy between China s level and the world s advanced level was so great

that we had to do our utmost to catch up Since then through numerous articles and frequent speeches he has drawn up a detailed technological and policy roadmap for doing exactly that This volume collects over 25 pieces written over more than 20 years It demonstrates the former president of China s authority and insight into the development of China s IT industry since the introduction of reforms and the cutting edge issues experienced throughout the global IT industry Jiang s ambitious goal is the transformation of China into a leader in the global IT industry by 2020 This volume offers IT industry analysts China watchers policy makers and advisors IT researchers and investors a singular and authoritative view on how China should get there Establishes key measurements for the development of China s IT industry Sets forth the priorities for government and industry Identifies opportunities for interrelating military and civilian R D and applications Reveals key obstacles to progress and directives for overcoming them Sets out an R D agenda for industry Names the core industry sectors for government and industry investment Identifies opportunities and the necessity for international collaboration Establishes the need to develop China s own IPR and to respect and protect others IPR Microprocessor-Based Control Systems N.K. Sinha, 2012-12-06 Recent advances in LSI technology and the consequent availability of inexpensive but powerful microprocessors have already affected the process control industry in a significant manner Microprocessors are being increasingly utilized for improving the performance of control systems and making them more sophisticated as well as reliable Many concepts of adaptive and learning control theory which were considered impractical only 20 years ago are now being implemented With these developments there has been a steady growth in hardware and software tools to support the microprocessor in its complex tasks With the current trend of using several microprocessors for performing the complex tasks in a modern control system a great deal of emphasis is being given to the topic of the transfer and sharing of information between them Thus the subject of local area networking in the industrial environment has become assumed great importance The object of this book is to present both hardware and software concepts that are important in the development of microprocessor based control systems An attempt has been made to obtain a balance between theory and practice with emphasis on practical applications It should be useful for both practicing engineers and students who are interested in learning the practical details of the implementation of microprocessor based control systems As some of the related material has been published in the earlier volumes of this series duplication has been avoided as far as possible
