Settles,2012-12-06

Schlieren and shadowgraph techniques are basic and valuable tools in various scientific and engineering disciplines They allow us to see the invisible the optical inhomogeneities in transparent media like air water and glass that otherwise cause only ghostly distortions of our normal vision These techniques are discussed briefly in many books and papers but there is no up to date complete treatment of the subject before now The book is intended as a practical guide for those who want to use these methods as well as a resource for a broad range of disciplines where scientific visualization is important The colorful 400 year history of these methods is covered in an extensive introductory chapter accessible to all readers      Protocol for Somatic Embryogenesis in Woody Plants Shri Mohan Jain, Pramod K. Gupta,2005-08-26 World population is increasing at an alarming rate and this has resulted in increasing tremendously the demand for tree products such as wood for construction materials fuel and paper fruits oils and medicines etc This has put immense pressure on the world's supplies of trees and raw material to industry and will continue to do so as long as human population continues to grow Also the quality of human diet especially nutritional components is adversely affected due to limited genetic improvement of most of fruit trees Thus there is an immediate need to increase productivity of trees Improvement has been made through conventional breeding methods however conventional breeding is very slow due to long life cycle of trees A basic strategy in tree improvement is to capture

genetic gain through clonal propagation Clonal propagation via organogenesis is being used for the production of selected elite individual trees However the methods are labour intensive costly and produce low volumes Genetic gain can now be captured through somatic embryogenesis Formation of embryos from somatic cells by a process resembling zygotic embryogenesis is one of the most important features of plants In 1958 Reinert in Germany and Steward in USA independently reported somatic embryogenesis in carrot cultures Since then tremendous progress in somatic embryogenesis of woody and non woody plants has taken place It offers a potentially large scale propagation system for superior clones
