Disable unnecessary protocols, services on the cluster interconnect connection

The following changes should be made on the Private Cluster NIC on both nodes in the cluster:

- Disable Client for Microsoft Networks and File and Printer Sharing
- Disable register this connection with DNS
- Disable **NetBIOS**

These are enabled by default as part of the Microsoft Windows Server installation. The 'Client for Microsoft Networks' and 'File and Printer Sharing' components are not required by the cluster interconnect. The cluster interconnect is used solely for intra-cluster node communications; it should not try and register with DNS. The correct settings are shown in Figure 17:
