Paraoxonase Pon1 In Health And Disease Basic And Clinical Aspects:

Paraoxonase (PON1) in Health and Disease Lucio G. Costa, Clement E. Furlong, 2002-11-30 The journey to find genes responsible for determining sensitivity or resistance to specific insecticides led to the paraoxonase PON1 gene on human chromosome 7 This gene encodes a 355 amino acid protein that is localized on the high density lipoprotein HDL particles in plasma Characterization of this gene revealed that different individuals expressed both different forms of this enzyme with amino acid substitutions at positions 55 and 192 as well as different levels of this protein Additional studies showed that mutations in the regulatory region of the PON1 gene contributed to the very different levels of plasma PON1 among individuals It turned out that both the level of the enzyme as well as the amino acid present at position 192 glutamine or arginine are important in determining resistance to the active forms of specific organophosphorus insecticides especially diazinon and chlorpyrifos The position 192 amino acid also determined whether an individual's plasma hydrolyzed the nerve agents soman and sarin at high or low rates It is not yet known whether these different rates of hydrolysis observed in biochemical assays reflect differences in sensitivity of individuals to nerve agents Taken together all of the experiments carried out to date indicate that engineered recombinant PON1 is an excellent candidate to use for treating cases of poisoning by specific organophosphorus compounds The available data on the relationship of PON1 levels and position 192 genotype led us to introduce the term PON1 status to describe an individual's PON1 plasma level as well as their position 192 genotype The characterization of the genetic variations of the PON1 gene together with experiments showing that HDL can protect the lipids in low density lipoprotein particles LDL from oxidation and that it was PON1 that was responsible for this protection have opened an entirely new area of investigation the role of PON1 in protecting against vascular disease More recent reports have noted that PON1 also metabolizes a number of drugs activating some and inactivating others This book describes the recent advances in understanding the role of PON1 in both cardiovascular disease and toxicology of insecticide exposure as well as some of the recent information indicating an important possible role in the pharmacokinetics of drug metabolism The final chapter of the book provides an overview of the areas of PON1 research and suggests future directions for research on PON1 as well as the related linked genes PON2 and PON3

Paraoxonase (PON1) in Health and Disease Lucio G. Costa, Clement E. Furlong, 2012-12-06 The paraoxonase or PON family of genes resides on human chromosome 7q21.22 in the order PON1, PON3 and PON2 PON1 was one of the early genes identified as an environmentally relevant gene in that it is important in determining an individual's sensitivity or resistance to exposure from specific organophosphorus (OP) insecticides Paraoxonase PON1 is an A esterase i.e. not inhibited by OP compounds initially identified for its ability to catalytically hydrolyze paraoxon the toxic metabolite oxon form of the insecticide parathion Evidence accumulated in the past several years has established that this enzyme which is present at variable levels in liver and serum of different individuals is an important determinant of sensitivity to toxicity of specific organophosphorus compounds

including chlorpyrifos oxon and diazoxon Recent experiments have pointed out that it is the catalytic efficiency of PONT together with the levels of PONT that are important in determining the degree of resistance Surprisingly even though PONT has a higher catalytic efficiency than PONTQ 92 for paraoxon RJ92 hydrolysis it does not provide significant in vivo protection against an exposure to paraoxon Interest in this enzyme has also emerged from the finding that it displays genetic polymorphisms in most populations with a significant number of the individuals in a given population carrying a PONT gene that puts them at risk for a specific OP exposure *Paraoxonase (Pon1) in Health and Disease* Lucio G Costa, Clement E Furlong, 2002-11-30

The Paraoxonases: Their Role in Disease Development and Xenobiotic Metabolism Bharti Mackness, Mike Mackness, Michael Aviram, György Paragh, 2007-10-26 In September 2006 the 2nd International Conference on Paraoxonases took place in Hajd szoboszl Hungary bringing together the world s foremost experts in the field The current book is a distillation of the plenary lectures which took place at the meeting resulting in a comprehensive up to date state of the art review of current paraoxonase research The book details a unique and novel enzyme whose physiological pathological functions are just starting to be revealed *Environmental Health Perspectives*, 2004

Toxicogenomics and Proteomics James J. Valdes, Jennifer W. Sekowski, 2004 Annotation The field of toxicology has developed a well characterized set of techniques to assess the behavioral and histopathological consequences of exposure to environmental insults using a number of animal models These techniques are suitable for determining crude endpoints of exposure such as death but are not optimal for assessing the more subtle effects of very low level or multi agent chemical exposures nor do they offer mechanistic explanations at the molecular level This book is designed to have a mix of chapters devoted to classical toxicology followed by those focused more on the emerging techniques of toxicogenomics and proteomics In this way the relevance of new technologies such as gene arrays to classical toxicologic problems is made evident Finally because the worst of the world s toxicology problems reside in developing nations while the latest technical developments are occurring in the industrial nations we sought to provide a balance of both scientific and geographical perspectives from researchers engaged in toxicology and public health research

Autism Abha Chauhan, Ved Chauhan, Ted Brown, 2009-10-26 In 2007 the Centers for Disease Control and Prevention issued an autism alarm estimating that one in 150 children may be affected by autism spectrum disorder Autism has been treated mainly with technical approaches principally applied behavior analysis and psychopharmacology The findings in this book implicate oxidative stress as a common feat
