The Parasite-Stress Theory of Values and Sociality Randy Thornhill, Corey L. Fincher, 2014-07-17 This book develops and tests an ecological and evolutionary theory of the causes of human values the core beliefs that guide people's cognition and behavior and their variation across time and space around the world We call this theory the parasite stress theory of values or the parasite stress theory of sociality The evidence we present in our book indicates that both a wide span of human affairs and major aspects of human cultural diversity can be understood in light of variable parasite infectious disease stress and the range of value systems evoked by variable parasite stress The same evidence supports the hypothesis that people have psychological adaptations that function to adopt values dependent upon local infectious disease adversity The authors have identified key variables variation in infectious disease adversity and in the core values it evokes for understanding these topics and in novel and encompassing ways Although the human species is the focus in the book evidence presented in the book shows that the parasite stress theory of sociality informs other topics in ecology and evolutionary biology such as variable family organization and speciation processes and biological diversity in general in non human animals

Crawley, 2009-07-30 This book is about disease and death It is an ecologist's view of Darwin's vivid evocation of Nature red in tooth and claw An international team of authors examines broad patterns in the population biology of natural enemies and addresses general questions about the role of natural enemies in the population dynamics and evolution of their prey For instance how do large natural enemies like wolves differ from small natural enemies like bacterial diseases in their effects on prey abundance Is it better to chase after prey or sit and wait for it to come to you How should prey behave in order to minimize the risk of being eaten The answers are all in this fascinating senior undergraduate postgraduate text

has provided the clinician research scientist with a much clearer understanding of the mechanisms of pathogenesis The number of recently discovered interleukins and their cellular networks has completely re ordered our comprehension of how parasites and our defense system works to produce protection against infection reinfection or in some cases how it becomes subverted by the offending pathogen to enable it to endure inside us for long periods of time A plethora of molecular based diagnostic tests have found their way into the routine of the parasitology diagnostic laboratory improving the ease at which the offending pathogen can be rapidly identified Newer drugs many with less harmful side effects than the ones they replaced have come on the market that make controlling parasite populations at the community level possible without the risk of harming the very ones we wish to help

Parasitic Diseases

Dickson D. Despommier, Robert W. Gwadz, Peter J. Hotez, 2012-12-06 Worldwide the numbers of people suffering and dying from parasitic diseases are overwhelming with more than 100 million cases and 1 million deaths each year from malaria alone Despite the magnitude of the problem and the importance of the parasites that cause opportunistic infections among persons with HIV AIDS medical schools in the United States Canada and other developed countries consistently reduce the amount of time spent on parasitic diseases in the curriculum As a result most medical students receive limited information about these diseases and are inadequately prepared to diagnose or treat them as physicians This problem is too large to be resolved within the time available for parasitology in the medical school curriculum at most students can be acquainted with the salient features of the medically important parasites Likewise the traditional isolation of parasitology from the rest of the curriculum consistent with its exclusion from most microbiology texts is another unresolved problem In my opinion this is why most physicians are unable to think about the differential diagnosis of parasitic diseases in the same way that they routinely balance the probabilities of malignancy cardiovascular renal and pulmonary disease vs other infectious diseases To resolve these problems relevant paradigms from parasitology must be used in the teaching of cell biology molecular biology genetics and immunology
