Synopsis of the Parasites of Fishes of Canada T. E. McDonald, L. Margolis, National Research Council Canada, Pacific Biological Station, 1995 Information on the parasites of Canadian fishes published between the years 1978 and 1993 inclusive is assembled as Parasite Host and Host Parasite lists

The 925 named species of parasites are reported on 292 species of Canadian fishes. The Parasite Host list is organized on a taxonomic basis and identifies for each species its habitat (freshwater, marine, or brackish), site of occurrence in its host, species, host's known geographic distribution within Canadian waters, and the published source for each host and locality record. The Host Parasite list is organized according to the taxonomy of the hosts and is accompanied by data on the known Canadian distribution of the parasites. For both the Parasite Host and Host Parasite lists, a Remarks section containing explanatory comments concerning systematics, nomenclature, and notes on other specific items is included as warranted. In addition to listing the cited references, a supplementary list of references is included to cover other Canadian literature on fish parasites.

Diagnosis and Control of Diseases of Fish and Shellfish Brian Austin, Aweeda Newaj-Fyzul, 2017-03-20. There has been a continual expansion in aquaculture such that total production is fast approaching that of wild-caught fisheries. Yet the expansion is marred by continued problems of disease. New pathogens emerge and others become associated with new conditions. Some of these pathogens become well established and develop into major killers of aquatic species. *Diagnosis and Control of Diseases of Fish and Shellfish* focuses on the diagnosis and control of diseases of fish and shellfish, notably those affecting aquaculture. Divided into 12 chapters, the book discusses the range of bacterial, viral, and parasitic pathogens, their trends, emerging problems, and the relative significance to aquaculture. Developments in diagnostics and disease management, including the widespread use of serological and molecular methods, are presented. Application, dose, and mode of action of prebiotics, probiotics, and medicinal plant products used to control disease are examined, as well as the management and hygiene precautions that can be taken to prevent control the spread of disease. This book will be a valuable resource for researchers, students, diagnosticians, veterinarians, fish pathologists, and microbiologists concerned with the management of diseases of fish and shellfish.

Ecology of the Acanthocephala C. R. Kennedy, 2006-09-07. Acanthocephalans or spiny-headed worms are endoparasites found in almost all marine, freshwater, and terrestrial systems. They infect a huge range of definitive and intermediate hosts during their life cycles, including both vertebrates and arthropods. This volume, first published in 2006, examines the distribution and abundance of the Acanthocephala and uses this ecological information to reveal the group's enormous survival success. It discusses how the acanthocephalans have evolved differently to all other groups of parasites and represent a distinct and alternative pathway of parasite evolution and host-parasite interactions. Written for graduate students and researchers in parasitology, ecology, and zoology, or anyone interested in reading about parasite ecology and evolution.

Parasite Communities: Patterns and Processes Gerald W. Esch, 2012-12-06. We first discussed the possibility of organizing a symposium on helminth communities in June 1986. At that time, we were engaged in writing a joint paper on potential structuring mechanisms in helminth communities; we disagreed on a number of issues. We felt the reason for such debate was because the discipline was in a great state of flux, with many new concepts and approaches being introduced with increasing frequency. After considerable discussion about the need, scope, and the

inevitable limitations of such a symposium we decided that the time was ripe to bring other ecologists engaged in similar research face to face There were many individuals from whom to choose we selected those who were actively publishing on helminth communities or those who had expertise in areas which we felt were particularly appropriate We compiled a list of potential participants contacted them and received unanimous support to organize such a symposium Our intent was to cover several broad areas fully recognizing that breadth negates depth at least with a publisher's limitation on the number of pages We felt it important to consider patterns amongst different kinds of hosts because this is where we had disagreed among ourselves
