other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives, generate stress or calm, and create any number of emotions including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8, universal preventive and targeted strategies used in a variety of settings that have been effective with parents of young children, and that support the identified knowledge, attitudes, and practices, and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes, as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy research and practice in the United States.

Kerig, 2014-06-03 Gain a better understanding of parent child boundaries and the mechanisms for their dissolution The breakdown of appropriate generational boundaries between parent and child can threaten the child's psychological development Implications of Parent Child Boundary Dissolution for Developmental Psychopathology Who Is the Parent and

Who Is the Child explores this covert and oftentimes ignored form of emotional abuse discussing in detail the various ways it can manifest. This revealing text comprehensively examines how the burden of meeting the emotional needs of the parent interferes with the child's healthy development. The boundary dissolution patterns of role reversal, enmeshment, psychological control, and triangulation are closely examined with an eye toward providing appropriate strategies for dealing with the problem. Implications of Parent-Child Boundary Dissolution for Developmental Psychopathology is separated into four sections to focus extensively on every aspect of the problem. The first section discusses definitions, concepts, and methodological concerns of the phenomena, including a consideration of the child's developmental responses to boundary dissolution. The second section explores the empirical research concerning boundary dissolution within the family system and includes intriguing information on the actual mechanism that passes the pattern of role reversal on to the following generation. The next section closely examines boundary violations within high-risk families with a focus on those undergoing divorce. The final section concentrates on cultural contexts of boundary dissolution and includes a look at the perception of familial responsibility and its effects on Bosnian youths. This one-of-a-kind resource is extensively referenced and provides a solid foundation to inspire a new generation of theory research and clinical work. Implications of Parent-Child Boundary Dissolution for Developmental Psychopathology examines a multidimensional model of boundary dissolution with supporting research, a comprehensive review of published literature in the areas of attachment theory, developmental capacities of the infant, child-rearing practices, and parental beliefs, the theoretical background supporting the construct of boundary dissolution, the boundary disturbance patterns of enmeshment and control, the relationships between interparental conflict, parental responses to children's emotions, and representations of role reversal and vulnerability in children's family drawings, the spill-over effect of marital conflict, role reversal in high-risk families, children's rejection of one parent over another in custody disputes, post-war adjustment of Bosnian adolescents, psychological control in individualist and collectivist groups, representations of parents and children in twentieth-century American novels. Implications of Parent-Child Boundary Dissolution for Developmental Psychopathology is crucial reading for researchers and clinicians who deal with families and psychopathology and is of particular interest to graduate students in clinical child psychology, child and family studies, social work, and developmental psychology.
