Parkinsons Disease And Movement Disorders:

Parkinson's Disease and Movement Disorders Charles H. Adler,J. Eric Ahlskog,2000-04-07 The field of movement disorders is relatively broad encompassing disorders of increased movement such as tremors dystonia and tics to disorders characterized by a paucity of movement such as Parkinson s disease Our understanding of the pathogenic mechanisms and our treatment options are expanding at a rapid pace This expansion ranges from the medical and surgical advances in treating Parkinson s disease to the flood of genetic abnormalities that have now been found to cause various movement disorders Although many patients are seen by the movement disorders specialist in neurology clinics around the country most of these patients receive their followup care from a primary care physician or general neurologist who must be versed in the character istics and treatment plans of this diverse group of disorders The major goal of Parkinson s Disease and Movement Disorders Diagnosis and Treatment Guidelines for the Practicing Physician is to distill this immense amount of information and to educate the practitioner about the many facets of the movement disorders field We believe that this book fills a large void since most texts on movement disorders are more detailed and geared toward the specialist We have asked the chapter authors to emphasize the clinical characteristics of each disorder discuss the differential diagnosis and the diagnostic testing and then outline the various treatment options as if they were teaching during a preceptorship in their clinic

Non-Motor Symptoms of Parkinson's Disease K. Ray Chaudhuri, Eduardo Tolosa, Anthony Henry Vernon Schapira, W. Poewe, 2014. Patients with Parkinson's disease (PD) are known to suffer from motor symptoms of the disease but they also experience non-motor symptoms (NMS) that are often present before diagnosis or that inevitably emerge with disease progression. The motor symptoms of Parkinson's disease have been extensively researched and effective clinical tools for their assessment and treatment have been developed and are readily available. In contrast, researchers have only recently begun to focus on the NMS of Parkinson's Disease which are poorly recognized and inadequately treated by clinicians. The NMS of PD have a significant impact on patient quality of life and mortality and include neuropsychiatric, sleep-related, autonomic, gastrointestinal and sensory symptoms. While some NMS can be improved with currently available treatments, others may be more refractory and will require research into novel non-dopaminergic drug therapies for the future. Edited by members of the UK Parkinson's Disease Non-Motor Group (PD NMG) and with contributions from international experts, this new edition summarizes the current understanding of NMS symptoms in Parkinson's disease and points the way towards future research.
