   Multi-dimensional Hyperbolic Partial Differential Equations Sylvie Benzoni-Gavage,Denis Serre,2007 Authored by leading scholars this comprehensive text presents a view of the multi dimensional hyperbolic partial differential equations with a particular emphasis on problems in which modern tools of analysis have proved useful It is useful to graduates and researchers in both hyperbolic PDEs and compressible fluid dynamics   **Recent Trends in Partial Differential Equations** Juan Luis Vazquez,Xavier Cabré,José Antonio Carrillo,2006 This volume contains the research and expository articles for the courses and talks given at the UIMP RSME Lluis A Santalo Summer School Recent Trends in Partial Differential Equations The goal of the Summer School was to present some of the many advances that are currently taking place in the interaction between nonlinear partial differential equations and their applications to other scientific disciplines Oriented to young post docs and advanced doctoral students the courses dealt with topics of current interest Some of the tools presented are quite powerful and sophisticated These new methods are presented in an expository manner or applied to a particular example to demonstrate the main ideas of the method and to serve as a handy introduction to further study Young researchers in partial differential equations and colleagues from neighboring fields will find these notes a good addition to their libraries This is a joint publication of the Real Sociedad Matematica Espanola and the American Mathematical Society   Asymptotic Analysis of Fields in Multi-structures Vladimir Kozlov,V. G. Maz′i︠a︡,V. G. Maz︠i︡a,Alexander B. Movchan,1999 This book outlines a powerful new method in analysis which has already been instrumental in solving complicated partial differential equations arising in various areas of engineering It is suitable for those working with partial differential equations and their applications and an undergraduate knowledge of PDE s and functional analysis is assumed   **Discrete and Continuous Models in the Theory of Networks** Fatihcan M. Atay,Pavel B. Kurasov,Delio Mugnolo,2020-09-03 This book contains contributions from the participants of the research group hosted by the ZiF Center for Interdisciplinary Research at the University of Bielefeld during the period 2013 2017 as well as from the

conclusive conference organized at Bielefeld in December 2017 The contributions consist of original research papers they mirror the scientific developments fostered by this research program or the state of the art results presented during the conclusive conference The volume covers current research in the areas of operator theory and dynamical systems on networks and their applications indicating possible future directions The book will be interesting to researchers focusing on the mathematical theory of networks it is unique as for the first time continuous network models a subject that has been blooming in the last twenty years are studied alongside more classical and discrete ones Thus instead of two different worlds often growing independently without much intercommunication a new path is set breaking with the tradition The fruitful and beneficial exchange of ideas and results of both communities is reflected in this book   *Representations of Algebras* Fla'vio Ulhoa Coelho,2019-05-20 This volume contains the proceedings of the Conference on Representations of Algebras Sao Paulo CRASP held at the Instituto de Matematica e Estatistica of the Universidade de Sao Paulo Brazil It discusses Hopf tubular quasischurian wild hereditary concealed canonical Artin Brauer star and Koszul algebras   **Local Cohomology and Its Applications** Gennady Lybeznik,2001-10-18 This volume collects presentations from the international workshop on local cohomology held in Guanajuato Mexico including expanded lecture notes of two minicourses on applications in equivariant topology and foundations of duality theory and chapters on finiteness properties D modules monomial ideals combinatorial analysis and related topics   **Mathematical Modelling, Optimization, Analytic and Numerical Solutions** Pammy Manchanda,René Pierre Lozi,Abul Hasan Siddiqi,2020-02-04 This book discusses a variety of topics related to industrial and applied mathematics focusing on wavelet theory sampling theorems inverse problems and their applications partial differential equations as a model of real world problems computational linguistics mathematical models and methods for meteorology earth systems environmental and medical science and the oil industry It features papers presented at the International Conference in Conjunction with 14th Biennial Conference of ISIAM held at Guru Nanak Dev University Amritsar India on 2 4 February 2018 The conference has emerged as an influential forum bringing together prominent academic scientists experts from industry and researchers The topics discussed include Schrodinger operators quantum kinetic equations and their application extensions of fractional integral transforms electrical impedance tomography diffuse optical tomography Galerkin method by using wavelets a Cauchy problem associated with Korteweg de Vries equation and entropy solution for scalar conservation laws This book motivates and inspires young researchers in the fields of industrial and applied mathematics   **Semigroup Methods for Evolution Equations on Networks** Delio Mugnolo,2014-05-21 This concise text is based on a series of lectures held only a few years ago and originally intended as an introduction to known results on linear hyperbolic and parabolic equations Yet the topic of differential equations on graphs ramified spaces and more general network like objects has recently gained significant momentum and well beyond the confines of mathematics there is a lively interdisciplinary discourse on all aspects of so called complex networks Such network like structures can be

found in virtually all branches of science engineering and the humanities and future research thus calls for solid theoretical foundations This book is specifically devoted to the study of evolution equations i e of time dependent differential equations such as the heat equation the wave equation or the Schr dinger equation quantum graphs bearing in mind that the majority of the literature in the last ten years on the subject of differential equations of graphs has been devoted to elliptic equations and related spectral problems Moreover for tackling the most general settings e g encoded in the transmission conditions in the network nodes one classical and elegant tool is that of operator semigroups This book is simultaneously a very concise introduction to this theory and a handbook on its applications to differential equations on networks With a more interdisciplinary readership in mind full proofs of mathematical statements have been frequently omitted in favor of keeping the text as concise fluid and self contained as possible In addition a brief chapter devoted to the field of neurodynamics of the brain cortex provides a concrete link to ongoing applied research **Analysis on Graphs and Its Applications** Pavel Exner,2008 This book addresses a new interdisciplinary area emerging on the border between various areas of mathematics physics chemistry nanotechnology and computer science The focus here is on problems and techniques related to graphs quantum graphs and fractals that parallel those from differential equations differential geometry or geometric analysis Also included are such diverse topics as number theory geometric group theory waveguide theory quantum chaos quantum wiresystems carbon nano structures metal insulator transition computer vision and communication networks This volume contains a unique collection of expert reviews on the main directions in analysis on graphs e g on discrete geometric analysis zeta functions on graphs recently emerging connections between the geometric group theory and fractals quantum graphs quantum chaos on graphs modeling waveguide systems and modeling quantum graph systems with waveguides control theory on graphs as well as research articles The Navier-Stokes Equations Rodolfo Salvi,2001-09-27 Contains proceedings of Varenna 2000 the international conference on theory and numerical methods of the navier Stokes equations held in Villa Monastero in Varenna Lecco Italy surveying a wide range of topics in fluid mechanics including compressible incompressible and non newtonian fluids the free boundary problem and hydrodynamic potential theory *Arithmetical Properties of Commutative Rings and Monoids* Scott T. Chapman,2005-03-01 The study of nonunique factorizations of elements into irreducible elements in commutative rings and monoids has emerged as an independent area of research only over the last 30 years and has enjoyed a recent flurry of activity and advancement This book presents the proceedings of two recent meetings that gathered key researchers from around the w **Control and Boundary Analysis** John Cagnol,Jean-Paul Zolesio,2005-03-04 This volume comprises selected papers from the 21st Conference on System Modeling and Optimization in Sophia Antipolis France It covers over three decades of studies involving partial differential systems and equations Topics include the modeling of continuous mechanics involving fixed boundary control theory shape optimization and moving bou Ideal Theoretic Methods in Commutative Algebra Daniel Anderson,Ira J. Patrick,2019-05-07 Includes

current work of 38 renowned contributors that details the diversity of thought in the fields of commutative algebra and multiplicative ideal theory Summarizes recent findings on classes of going down domains and the going down property emphasizing new characterizations and applications as well as generalizations for commutative rings wi   <u>P-Adic Functional Analysis</u> A.K. Katsaras,W.H. Schikhof,L. Van Hamme,2001-07-03 This volume collects together lectures presented at the Sixth International Conference held at the University of Ioannina Greece on p adic functional analysis with applications in the fields of physics differential equations number theory probability theory dynamical systems and algebraic number fields It discusses the commutation relation AB BA I and its central role in quantum mechanics   **Ring Theory And Algebraic Geometry** A. Jones,Konstantin Mischaikow,Genevieve Raugel,2006-11-14 This volume contains the lecture notes written by the four principal speakers at the C I M E session on Dynamical Systems held at Montecatini Italy in June 1994 The goal of the session was to illustrate how methods of dynamical systems can be applied to the study of ordinary and partial differential equations Topics in random differential equations singular perturbations the Conley index theory and non linear PDEs were discussed Readers interested in asymptotic behavior of solutions of ODEs and PDEs and familiar with basic notions of dynamical systems will wish to consult this text   <u>Vector-valued Laplace Transforms and Cauchy Problems</u> Wolfgang Arendt,Charles J.K. Batty,Frank Neubrander,2013-11-11 Linear evolution equations in Banach spaces have seen important developments in the last two decades This is due to the many different applications in the theory of partial differential equations probability theory mathematical physics and other areas and also to the development of new techniques One important technique is given by the Laplace transform It played an important role in the early development of semigroup theory as can be seen in the pioneering monograph by Rille and Phillips HP57 But many new results and concepts have come from Laplace transform techniques in the last 15 years In contrast to the classical theory one particular feature of this method is that functions with values in a Banach space have to be considered The aim of this book is to present the theory of linear evolution equations in a systematic way by using the methods of vector valued Laplace transforms It is simple to describe the basic idea relating

these two subjects Let A be a closed linear operator on a Banach space X The Cauchy problern defined by A is the initial value problern t 2 0 CP u t Au t u O x where x E X is a given initial value If u is an exponentially bounded continuous function then we may consider the Laplace transform 00 u 1 e tu t dt of u for large real
