   Elliptic–Hyperbolic Partial Differential Equations Thomas H. Otway,2015-07-21 This text is a concise introduction to the partial differential equations which change from elliptic to hyperbolic type across a smooth hypersurface of their domain These are becoming increasingly important in diverse sub fields of both applied mathematics and engineering for example The heating of fusion plasmas by electromagnetic waves The behaviour of light near a caustic Extremal surfaces in the space of special relativity The formation of rapids transonic and multiphase fluid flow The dynamics of certain models for elastic structures The shape of industrial surfaces such as windshields and airfoils Pathologies of traffic flow Harmonic fields in extended projective space They also arise in models for the early universe for cosmic acceleration and for possible violation of causality in the interiors of certain compact stars Within the past 25 years they have become central to the isometric embedding of Riemannian manifolds and the prescription of Gauss curvature for surfaces topics in pure mathematics which themselves have important applications Elliptic Hyperbolic Partial Differential Equations is derived from a mini course given at the ICMS Workshop on Differential Geometry and Continuum Mechanics held in Edinburgh Scotland in June 2013 The focus on geometry in that meeting is reflected in these notes along with the focus on quasilinear equations In the spirit of the ICMS workshop this course is addressed both to applied mathematicians and to mathematically oriented engineers The emphasis is on very recent applications and methods the majority of which have not previously appeared in book form   **A Minicourse on Stochastic Partial Differential Equations** Robert C. Dalang,2009 This title contains lectures that offer an introduction to modern topics in stochastic partial differential equations and bring together experts whose research is centered on the interface between Gaussian analysis stochastic analysis and stochastic PDEs   **Introduction to Partial Differential Equations** Aslak Tveito,Ragnar Winther,2008-01-21 Combining both the classical theory and numerical techniques for partial differential equations this thoroughly modern approach shows the significance of computations in PDEs and illustrates the strong interaction between mathematical theory and the development of numerical methods Great care has been taken throughout the book to seek a sound balance between these techniques The authors present the material at an easy pace and exercises ranging from the straightforward to the challenging have been included In addition there are some projects suggested either to refresh the students memory of results needed in this course or to extend the theories developed in the text Suitable for undergraduate and graduate students in mathematics and engineering   **Nonlinear Dispersive Partial Differential Equations and Inverse Scattering** Peter D. Miller,Peter A. Perry,Jean-Claude Saut,Catherine Sulem,2019-11-14 This volume contains lectures and invited papers from the Focus Program on Nonlinear Dispersive Partial Differential Equations and Inverse Scattering held at the Fields Institute from July 31 August 18 2017 The conference brought together researchers in completely integrable systems and PDE with the goal of advancing the understanding of qualitative and long time behavior in dispersive nonlinear equations The program included Percy Deift s

Coxeter lectures which appear in this volume together with tutorial lectures given during the first week of the focus program The research papers collected here include new results on the focusing nonlinear Schr dinger NLS equation the massive Thirring model and the Benjamin Bona Mahoney equation as dispersive PDE in one space dimension as well as the Kadomtsev Petviashvili II equation the Zakharov Kuznetsov equation and the Gross Pitaevskii equation as dispersive PDE in two space dimensions The Focus Program coincided with the fiftieth anniversary of the discovery by Gardner Greene Kruskal and Miura that the Korteweg de Vries KdV equation could be integrated by exploiting a remarkable connection between KdV and the spectral theory of Schrodinger s equation in one space dimension This led to the discovery of a number of completely integrable models of dispersive wave propagation including the cubic NLS equation and the derivative NLS equation in one space dimension and the Davey Stewartson Kadomtsev Petviashvili and Novikov Veselov equations in two space dimensions These models have been extensively studied and in some cases the inverse scattering theory has been put on rigorous footing It has been used as a powerful analytical tool to study global well posedness and elucidate asymptotic behavior of the solutions including dispersion soliton resolution and semiclassical limits **Elliptic–Hyperbolic Partial Differential Equations** Thomas H. Otway,2015-07-08 This text is a concise introduction to the partial differential equations which change from elliptic to hyperbolic type across a smooth hypersurface of their domain These are becoming increasingly important in diverse sub fields of both applied mathematics and engineering for example The heating of fusion plasmas by electromagnetic waves The behaviour of light near a caustic Extremal surfaces in the space of special relativity The formation of rapids transonic and multiphase fluid flow The dynamics of certain models for elastic structures The shape of industrial surfaces such as windshields and airfoils Pathologies of traffic flow Harmonic fields in extended projective space They also arise in models for the early universe for cosmic acceleration and for possible violation of causality in the interiors of certain compact stars Within the past 25 years they have become central to the isometric embedding of Riemannian manifolds and the prescription of Gauss curvature for surfaces topics in pure mathematics which themselves have important applications Elliptic Hyperbolic Partial Differential Equations is derived from a mini course given at the ICMS Workshop on Differential Geometry and Continuum Mechanics held in Edinburgh Scotland in June 2013 The focus on geometry in that meeting is reflected in these notes along with the focus on quasilinear equations In the spirit of the ICMS workshop this course is addressed both to applied mathematicians and to mathematically oriented engineers The emphasis is on very recent applications and methods the majority of which have not previously appeared in book form **Hyperbolic Partial Differential Equations** Matthew Witten,2014-05-23 Hyperbolic Partial Differential Equations III is a refereed journal issue that explores the applications theory and or applied methods related to hyperbolic partial differential equations or problems arising out of hyperbolic partial differential equations in any area of research This journal issue is interested in all types of articles in terms of review mini monograph standard study or short communication Some studies presented in this journal

examples that highlight the phenomenon that stochastic PDEs are not a subset of PDEs In fact the introduction of noise in some partial differential equations can bring about not a small perturbation but truly fundamental changes to the system that the underlying PDE is attempting to describe The topics covered include a brief introduction to the stochastic heat equation structure theory for the linear stochastic heat equation and an in depth look at intermittency properties of the solution to semilinear stochastic heat equations Specific topics include stochastic integrals la Norbert Wiener an infinite dimensional It type stochastic integral an example of a parabolic Anderson model and intermittency fronts There are many possible approaches to stochastic PDEs The selection of topics and techniques presented here are informed by the guiding example of the stochastic heat equation A co publication of the AMS and CBMS **Scaling of Differential Equations** Hans Petter Langtangen,Geir K. Pedersen,2016-06-15 The book serves both as a reference for various scaled models with corresponding dimensionless numbers and as a resource for learning the art of scaling A special feature of the book is the emphasis on how to create software for scaled models based on existing software for unscaled models Scaling or non dimensionalization is a mathematical technique that greatly simplifies the setting of input parameters in numerical simulations Moreover scaling enhances the understanding of how different physical processes interact in a differential equation model Compared to the existing literature where the topic of scaling is frequently encountered but very often in only a brief and shallow setting the present book gives much more thorough explanations of how to reason about finding the right scales This process is highly problem dependent and therefore the book features a lot of worked examples from very simple ODEs to systems of PDEs especially from fluid mechanics The text is easily accessible and example driven The first part on ODEs fits even a lower undergraduate level while the most advanced multiphysics fluid mechanics examples target the graduate level The scientific literature is full of scaled models but in most of the cases the scales are just stated without thorough mathematical reasoning This book explains how the scales are found mathematically This book will be a valuable read for anyone doing numerical simulations based on ordinary or partial differential equations **Partial Differential Equations III** Michael Taylor,2010-11-10 The third of three volumes on partial differential equations this is devoted to nonlinear PDE It treats a number of equations of classical continuum mechanics including relativistic versions as well as various equations arising in differential geometry such as in the study of minimal surfaces isometric imbedding conformal deformation harmonic maps and prescribed Gauss curvature In addition some nonlinear diffusion problems are studied It also introduces such analytical tools as the theory of L Sobolev spaces H lder spaces Hardy spaces and Morrey spaces and also a development of Calderon Zygmund theory and paradifferential operator calculus The book is aimed at graduate students in mathematics and at professional mathematicians with an interest in partial differential equations mathematical physics differential geometry harmonic analysis and complex analysis **Recent Advances in Scientific Computing and Partial Differential Equations** S.-Y. Cheng,Chi-Wang Shu,Tao Tang,2003 The volume is from the proceedings of the international conference

held in celebration of Stanley Osher s sixtieth birthday It presents recent developments and exciting new directions in scientific computing and partial differential equations for time dependent problems and its interplay with other fields such as image processing computer vision and graphics Over the past decade there have been very rapid developments in the field This volume emphasizes the strong interaction of advanced mathematics with real world applications and algorithms The book is suitable for graduate students and research mathematicians interested in scientific computing and partial differential equations <u>From Particle Systems to Partial Differential Equations II</u> Patrícia Gonçalves,Ana Jacinta Soares,2015-04-04 This book focuses on mathematical problems concerning different applications in physics engineering chemistry and biology It covers topics ranging from interacting particle systems to partial differential equations PDEs statistical mechanics and dynamical systems The purpose of the second meeting on Particle Systems and PDEs was to bring together renowned researchers working actively in the respective fields to discuss their topics of expertise and to present recent scientific results in both areas Further the meeting was intended to present the subject of interacting particle systems its roots in and impacts on the field of physics and its relation with PDEs to a vast and varied public including young researchers The book also includes the notes from two mini courses presented at the conference allowing readers who are less familiar with these areas of mathematics to more easily approach them The contributions will be of interest to mathematicians theoretical physicists and other researchers interested in interacting particle systems partial differential equations statistical mechanics stochastic processes kinetic theory dynamical systems and mathematical modeling aspects **Linear Partial Differential Equations and Fourier Theory** Marcus Pivato,2010-01-07 This highly visual introductory textbook provides a rigorous mathematical foundation for all solution methods and reinforces ties to physical motivation
