Parallel Natural Language Processing:

Parallel Natural Language Processing Geert Adriaens, Udo Hahn, 1994 Parallel processing is not only a general topic of interest for computer scientists and researchers in artificial intelligence but it is gaining more and more attention in the community of scientists studying natural language and its processing computational linguists AI researchers psychologists The growing need to integrate large divergent bodies of knowledge in natural language processing applications or the belief that massively parallel systems are the only ones capable of handling the complexities and subtleties of natural language are just two examples of the reasons for this increasing interest Similar Languages, Varieties, and Dialects Marcos Zampieri, Preslav Nakov, 2021-09-02 Studying language variation requires comprehensive interdisciplinary knowledge and new computational tools This essential reference introduces researchers and graduate students in computer science linguistics and NLP to the core topics in language variation and the computational methods applied to similar languages varieties and dialects **Recent Advances in Natural Language Processing III** Nicolas Nicolov, 2004 This volume brings together revised versions of a selection of papers presented at the 2003 International Conference on Recent Advances in Natural Language Processing A wide range of topics is covered in the volume semantics dialog summarization anaphora resolution shallow parsing morphology part of speech tagging named entity question answering word sense disambiguation information extraction Various state of the art techniques are explored finite state processing machine learning support vector machines maximum entropy decision trees memory based learning inductive logic programming transformation based learning perceptions latent semantic analysis constraint programming The papers address different languages Arabic English German Slavic languages and use different linguistic frameworks HPSG LFG constraint based DCG This book will be of interest to those who work in computational linguistics corpus linguistics human language technology translation studies cognitive science psycholinguistics artificial intelligence and informatics **Natural Language Processing - NLP 2000** Dimitris N. Christodoulakis, 2003-06-26 This volume contains the papers prepared for the 2nd International Conference on Natural Language Processing held 2-4 June in Patras Greece The conference program features invited talks and submitted papers covering a wide range of NLP areas text segmentation morphological analysis lexical knowledge acquisition and representation grammar formalism and syntactic parsing discourse analysis language generation man machine interaction machine translation word sense disambiguation and information extraction The program committee received 71 abstracts of which unfortunately no more than 50% could be accepted Every paper was reviewed by at least two reviewers The fairness of the reviewing process is demonstrated by the broad spread of institutions and countries represented in the accepted papers So many have contributed to the success of the conference The primary credit of course goes to the authors and to the invited speakers By their papers and their inspired talks they established the quality of the conference Secondly thanks should go to the referees and to the program committee members who did a thorough and conscientious job It was not easy to select

the papers to be presented Last but not least my special thanks to the organizing committee for making this conference happen

Connectionist Approaches to Natural Language Processing R G Reilly, Noel Sharkey, 2016-07-22 Originally published in 1992 when connectionist natural language processing CNLP was a new and burgeoning research area this book represented a timely assessment of the state of the art in the field It includes contributions from some of the best known researchers in CNLP and covers a wide range of topics The book comprises four main sections dealing with connectionist approaches to semantics syntax the debate on representational adequacy and connectionist models of psycholinguistic processes The semantics and syntax sections deal with a variety of approaches to issues in these traditional linguistic domains covering the spectrum from pure connectionist approaches to

hybrid models employing a mixture of connectionist and classical AI techniques The debate on the fundamental suitability of connectionist architectures for dealing with natural language processing is the focus of the section on representational adequacy The chapters in this section represent a range of positions on the issue from the view that connectionist models are intrinsically unsuitable for all but the associationistic aspects of natural language to the other extreme which holds that the classical conception of representation can be dispensed with altogether The final section of the book focuses on the application of connectionist models to the study of psycholinguistic processes This section is perhaps the most varied covering topics from speech perception and speech production to attentional deficits in reading An introduction is provided at the beginning of each section which highlights the main issues relating to the section topic and puts the constituent chapters into a wider context

Parallel Genetic Algorithms Gabriel Luque, Enrique Alba, 2011-06-15 This book is the result of several years of research trying to better characterize parallel genetic algorithms pGAs as a powerful tool for optimization search and learning Readers can learn how to solve complex tasks by reducing their high computational times Dealing with two scientific fields parallelism and GAs is always difficult and the book seeks at gracefully introducing from basic concepts to advanced topics The presentation is structured in three parts The first one is targeted to the algorithms themselves discussing their components the physical parallelism and best practices in using and evaluating them A second part deals with the theory for pGAs with an eye on theory to practice issues A final third part offers a very wide study of pGAs as practical problem solvers addressing domains such as natural language processing circuits design scheduling and genomics This volume will be helpful both for researchers and practitioners The first part shows pGAs to either beginners and mature researchers looking for a unified view of the two fields GAs and parallelism The second part partially solves and also opens new investigation lines in theory of pGAs The third part can be accessed independently for readers interested in applications The result is an excellent source of information on the state of the art and future developments in parallel GAs
