InfoSphere DataStage Parallel Framework Standard Practices Julius Lerm, Paul Christensen, IBM Redbooks, 2013-02-12 In this IBM Redbooks publication we present guidelines for the development of highly efficient and scalable information integration applications with InfoSphere™ DataStage DS parallel jobs InfoSphere DataStage is at the core of IBM Information Server providing components that yield a high degree of freedom For any particular problem there might be multiple solutions which tend to be influenced by personal preferences background and previous experience All too often those solutions yield less than optimal and non scalable implementations This book includes a comprehensive detailed description of the components available and descriptions on how to use them to obtain scalable and efficient solutions for both batch and real time scenarios The advice provided in this document is the result of the combined proven experience from a number of expert practitioners in the field of high performance information integration evolved over several years This book is intended for IT architects Information Management specialists and Information Integration specialists responsible for delivering cost effective IBM InfoSphere DataStage performance on all platforms *Parallel Programming* Bertil Schmidt, Jorge Gonzalez-Martinez, Christian Hundt, Moritz Schlarb, 2017-11-20 *Parallel Programming Concepts and Practice* provides an upper level introduction to parallel programming In addition to covering general parallelism concepts this text teaches practical programming skills for both shared memory and distributed memory architectures The authors open source system for automated code evaluation provides easy access to parallel computing resources making the book particularly suitable for classroom settings Covers parallel programming approaches for single computer nodes and HPC clusters OpenMP multithreading SIMD vectorization MPI UPC Contains numerous practical parallel programming exercises Includes access to an automated code evaluation tool that enables students the opportunity to program in a web browser and receive immediate feedback on the result validity of their program Features an example based teaching of concept to enhance learning outcomes System z Parallel Sysplex Best Practices Frank Kyne, Bert de Beer, Luis Martinez, Harriet Morril, Miha Petric, David Viguers, Suzi Wendler, IBM Redbooks, 2011-01-11 This IBM Redbooks publication pulls together diverse information regarding the best way to design implement and manage a Parallel Sysplex to deliver the levels of performance and availability required by your organization This book should be of interest to system programmers availability managers and database administrators who are interested in verifying that your systems conform to IBM best practices for a Parallel Sysplex environment In addition to z OS and the sysplex hardware configuration this book also covers the major IBM subsystems CICS DB2 IMSTM MQ WebSphere Application Server To get the best value from this book readers should have hands on experience with Parallel Sysplex and have working knowledge of how your systems are set up and why they were set up in that manner **Parallel and Distributed Computation: Numerical Methods** Dimitri Bertsekas, John Tsitsiklis, 2015-03-01 This highly acclaimed work first published by Prentice Hall in 1989 is a comprehensive and theoretically

sound treatment of parallel and distributed numerical methods It focuses on algorithms that are naturally suited for massive parallelization and it explores the fundamental convergence rate of convergence communication and synchronization issues associated with such algorithms This is an extensive book which aside from its focus on parallel and distributed algorithms contains a wealth of material on a broad variety of computation and optimization topics It is an excellent supplement to several of our other books including Convex Optimization Algorithms Athena Scientific 2015 Nonlinear Programming Athena Scientific 1999 Dynamic Programming and Optimal Control Athena Scientific 2012 Neuro Dynamic Programming Athena Scientific 1996 and Network Optimization Athena Scientific 1998 The on line edition of the book contains a 95 page solutions manual

Social Justice K. V. Cybil, 2019-04-08 This book explores the political and philosophical underpinnings of exclusion and social injustice in India It examines social movements anti caste uprisings reformers like Ambedkar and Narayana Guru and writers like Foucault and Serres to establish a link between the political and social milieu of the idea of nationhood Going beyond the legal framework of justice the essays in the volume reassemble the social from popular perception and the margins and challenge Rawlsian and Eurocentric paradigms which have dominated discourse on social injustice The volume also draws on instances of history as well as contemporary issues as well as locating them in the context of social and post colonial theory An intellectually stimulating yet subaltern engagement with the idea of justice the volume will be of great interest to scholars and researchers of social theory law modern South Asian history and social exclusion and discrimination studies

Time-parallel Methods for Accelerating the Solution of Structural Dynamics Problems Julien Remi Cortial, 2011 The classical approach for solving evolution Partial Differential Equations PDEs using a parallel computer consists in first partitioning the spatial domain and assigning each subdomain to a processor to achieve space parallelism then advancing the solution sequentially However enabling parallelism along the time dimension despite its intrinsic difficulty can be of paramount importance to fast computations when space parallelism is unfeasible cannot fully exploit a massively parallel machine or when near real time prediction is desired The aforementioned objective can be achieved by applying classical domain decomposition principles to the time axis The latter is first partitioned into time slices to be processed independently Starting with approximate seed information that provides a set of initial conditions the response is then advanced in parallel in each time slice using a standard time stepping integrator This decomposed solution exhibits discontinuities or jumps at the time slice boundaries if the initial guess is not accurate Applying a Newton like approach to the time dependent system a correction function is then computed to improve the accuracy of the seed values and the process is repeated until convergence is reached Methods based on the above concept have been successfully applied to various problems but none was found to be competitive for even for the simplest of second order hyperbolic PDEs a class of equations that covers the field of structural dynamics among others To overcome this difficulty a key idea is to improve the sequential propagator used for correcting the seed values observing that the original evolution problem and the

derived corrective one are closely related The present work first demonstrates how this insight can be brought to fruition in the context of linear oscillators with numerical examples featuring structural models ranging from academic to more challenging large scale ones An extension of this method to nonlinear equations is then developed and its concrete application to geometrically nonlinear transient dynamics is presented Finally it is shown how the time reversibility property that characterizes some of the above problems can be exploited to develop a new framework that provides an increased speed up factor

Parallel-in-Time Integration Methods Benjamin Ong, Jacob Schroder, Jemma Shipton, Stephanie Friedhoff, 2021-08-24 This volume includes contributions from the 9th Parallel in Time PinT workshop an annual gathering devoted to the field of time parallel methods aiming to adapt existing computer models to next generation machines by adding a new dimension of scalability As the latest supercomputers advance in microprocessing ability they require new mathematical algorithms in order to fully realize their potential for complex systems The use of parallel in time methods will provide dramatically faster simulations in many important areas including biomedical e g heart modeling computational fluid dynamics e g aerodynamics and weather prediction and machine learning applications Computational and applied mathematics is crucial to this progress as it requires advanced methodologies from the theory of partial differential equations in a functional analytic setting numerical discretization and integration convergence analyses of iterative methods and the development and implementation of new parallel algorithms Therefore the workshop seeks to bring together an interdisciplinary group of experts across these fields to disseminate cutting edge research and facilitate discussions on parallel time integration methods

Piracy Cultures Manuel Castells, Gustavo Cardoso EDS, 2013-02-25 Piracy Cultures Editorial Introduction MANUEL CASTELLS 1 University of Southern California GUSTAVO CARDOSO Lisbon University Institute ISCTE IUL What are Piracy Cultures Usually we look at media consumption starting from a media industry definition We look at TV radio newspapers games Internet and media content in general all departing from the idea that the access to such content is made available through the payment of a license fee or subscription or simply because its either paid or available for free being supported by advertisements or under a freemium business model That is we look at content and the way people interact with it within a given system of thought that sees content and its distribution channels as the product of relationships between media companies organizations and individuals effectively a commercial relationship of a contractual kind with accordant rights and obligations But what if for a

moment we turned our attention to the empirical evidence of media consumption practice not just in Asia Africa and South America but also all over Europe and North America All over the world we are witnessing a growing number of people building media relationships outside those institutionalized sets of rules We do not intend to discuss whether we are dealing with legal or illegal practices our launching point for this analysis is that when a very significant proportion of the population is building its mediation through alternative channels of obtaining content such behavior should be studied in order to deepen our knowledge of media cultures Because we need a title to characterize those cultures in all their diversitybut at the same time in their commonplacenesswe propose to call it Piracy Cultures

Evidence Based Practice in School Mental Health James C Raines,2008-04-11 Though recent legislation embedded with the No Child Left Behind Act and the Individuals with Disabilities Improvement Act mandates the use of evidence in school based practice to demonstrate positive outcomes for all students school social workers especially those long out of school often lack the conceptual tools to locate evaluate and apply evidence in order to demonstrate the effectiveness of their work The first of its kind tailored specifically to this audience this SSAAA Workshop title guides school professionals in infusing research throughout their daily practice It shows school service providers a pragmatic approach to informing every major practice decision with the appropriate research so that students receive the best possible services This includes how to use research to make reliable and valid assessments how to use research to choose the best intervention and how to do research to evaluate progress Raines goes beyond creating a catalog of interventions that will soon be outdated and provides school social workers with a detailed road map of the EBP process Chapters detail the nuts and bolts of EBP explaining how to ask a relevant answerable question where to search for evidence how to appraise the literature and avoid the pitfalls of web based information how to adapt and apply the evidence in a developmentally and culturally sensitive way and how to evaluate the results Detailed examples along the way including sample spreadsheets practitioners can easily adapt to evaluate their students progress bring accountability within reach for school professionals who struggle to find the time resources and support sufficient to apply the best evidence to their schools

Youth-full Productions Nancy Ares,2010 The grounding concept of this book is that youth are active agents in creating

cultural practices and social spaces Drawing from disciplines including anthropology sociology education and cultural studies the chapters examine practices that youth who are members of traditionally marginalized groups develop through engagement in the varied contexts of their everyday lives Each chapter treats communities language communication and interaction patterns and culturally derived practices as valuable resources youth bring to the tasks and situations they negotiate across time and space The combination of chapters that fall within traditions of social and cultural foundations with those that fall within disciplinary learning focused approaches sets this book apart Across the chapters notions of youth as active agents in the production of knowledge selves and practice are illuminated by focusing on how youth participate in construction of assemblages of historically derived practices evolving relations of power discourses and new social cultural forms and practices The book also includes the editor s responses to the two main sections of the work a conversation in writing aimed at making explicit both what ties the chapters within the sections together and the broader implications of the combined and unique contributions
