Morris, Roger C. Shaw, 2013-03-14 This volume contains the proceedings of the 4th Refinement Workshop which was organised by the British Computer Society specialist group in Formal Aspects of Computing Science and held in Wolfson College Cambridge on 9 11 January 1991 The term refinement embraces the theory and practice of using formal methods for specifying and implementing hardware and software Most of the achievements to date in the field have been in developing the theoretical framework for mathematical approaches to programming and on the practical

side in formally specifying software while more recently we have seen the development of practical approaches to deriving programs from their specifications. The workshop gives a fair picture of the state of the art; it presents new theories for reasoning about software and hardware and case studies in applying known theory to interesting small and medium scale problems. We hope the book will be of interest both to researchers in formal methods and to software engineers in industry who want to keep abreast of possible applications of formal methods in industry. The programme consisted both of invited talks and refereed papers. The invited speakers were Ib Sørensen, Jean-Raymond Abrial, Donald MacKenzie, Ralph Back, Robert Milne, Mike Read, Mike Gordon, and Robert Worden, who gave the introductory talk. This is the first refinement workshop that solicited papers for refereeing and despite a rather late call for papers the response was excellent.

Fundamental Approaches to Software Engineering Michel Wermelinger, Tiziana Margaria-Steffen, 2004-03-01. ETAPS 2004 was the seventh instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised several conferences: FOSSACS, FASE, ESOP, CC, TACAS, 23 satellite workshops, 1 tutorial, and 7 invited lectures, not including those that are specific to the satellite events. The events that comprise ETAPS address various aspects of the system development process, including specification, design, implementation, analysis, and improvement. The languages, methodologies, and tools that support these activities are all well within its scope. Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on the one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

Algorithms Tetsuo Asano, 1990-08-02. This is the proceedings of the SIGAL International Symposium on Algorithms held at CSK Information Education Center, Tokyo, Japan, August 16-18, 1990. SIGAL Special Interest Group on Algorithms was organized within the Information Processing Society of Japan in 1988 to encourage research in the field of discrete algorithms and held 6-8 research meetings each year. This symposium is the first international symposium organized by SIGAL. In response to the call for papers, 88 papers were submitted from around the world. The program committee selected 34 for presentation at the symposium. The symposium also included 5 invited lectures and 10 invited presentations. The subjects of the papers range widely in the field of discrete algorithms in theoretical computer science. Keywords for these subjects are: computational geometry, graph algorithms, complexity theory, parallel algorithms, distributed computing, and computational algebra.

FME '93: Industrial-Strength Formal Methods Jim Woodcock, James C.P. Woodcock, Peter G. Larsen, 1993 The last few years have borne witness to a remarkable diversity of formal methods with applications to sequential and concurrent software to real time and reactive systems and to hardware design In that time many theoretical problems have been tackled and solved and many continue to be worked upon Yet it is by the suitability of their industrial application and the extent of their usage that formal methods will ultimately be judged This volume presents the proceedings of the first international symposium of Formal Methods Europe FME 93 The symposium focuses on the application of industrial strength formal methods Authors address the difficulties of scaling their techniques up to industrial sized problems and their suitability in the workplace and discuss techniques that are formal that is they have a mathematical basis and that are industrially applicable The volume has four parts Invited lectures containing a lecture by Cliff B Jones and a lecture by Antonio Cau and Willem Paul de Roever Industrial usage reports containing 6 reports Papers containing 32 selected and refereed papers Tool descriptions containing 11 descriptions

Exploring New Frontiers of Theoretical Informatics Jean-Jacques Lévy, Ernst W. Mayr, John C. Mitchell, 2006-04-11 In recent years IT application scenarios have evolved in very innovative ways Highly distributed networks have now become a common platform for large scale distributed programming high bandwidth communications are inexpensive and widespread and most of our work tools are equipped with processors enabling us to perform a multitude of tasks In addition mobile computing referring specifically to wireless devices and more broadly to dynamically configured systems has made it possible to exploit interaction in novel ways To harness the flexibility and power of these rapidly evolving interactive systems there is need of radically new foundational ideas and principles there

is need to develop the theoretical foundations required to design these systems and to cope with the many complex issues involved in their construction and there is need to develop effective principles for building and analyzing such systems Reflecting the diverse and wide spectrum of topics and interests within the theoretical computer science community Exploring New Frontiers of Theoretical Informatics is presented in two distinct but interrelated tracks Algorithms Complexity and Models of Computation Logic Semantics Specification and Verification Exploring New Frontiers of Theoretical Informatics contains 46 original and significant contributions addressing these foundational questions as well as 4 papers by outstanding invited speakers These papers were presented at the 3rd IFIP International Conference on Theoretical Computer Science TCS 2004 which was held in conjunction with the 18th World Computer Congress in Toulouse France in August 2004 and sponsored by the International Federation for Information Processing IFIP

Elements of Distributed Algorithms Wolfgang Reisig, 2013-04-17 Distributed Computing is rapidly becoming the principal computing paradigm in diverse areas of computing communication and control Processor clusters local and wide area networks and the information highway evolved a new kind of problems which can be solved with distributed algorithms In this textbook a variety of distributed algorithms are presented independently of particular programming languages or hardware using the graphically suggestive technique of Petri nets which is both easy to comprehend intuitively and formally rigorous By means of temporal logic the author provides surprisingly simple yet powerful correctness proofs for the algorithms The scope of the book ranges from distributed control and synchronization of two sites up to algorithms on any kind of networks Numerous examples show that description and analysis of distributed algorithms in this framework are intuitive and technically transparent

The Engineering of Large Systems, 1998-09-25 Since its first volume in 1960 Advances in Computers has presented detailed coverage of innovations in hardware and software and in computer theory design and applications It has also provided contributors with a medium in which they can examine their subjects in greater

depth and breadth than that allowed by standard journal articles As a result many articles have become standard references that continue to be of significant lasting value despite the rapid growth taking place in the field This volume is organized around engineering large scale software systems It discusses which technologies are useful for building these systems which are useful to incorporate in these systems and which are useful to evaluate these systems Fundamental Approaches to Software Engineering Mauro Pezzè, 2003-07-01 This book constitutes the refereed proceedings of the 6th International Conference on Fundamental Approaches to Software Engineering FASE 2003 held in Warsaw Poland in April 2003 The 20 revised full papers presented together with a keynote paper were carefully reviewed and selected from 89 submissions The papers are organized in topical sections on software components mobile computing aspects and web applications software measurements formal verification analysis and testing and model integration and extension **Algebraic Methodology and Software Technology (AMAST'93)** Maurice Nivat, Charles Ratray, Teodor Rus, Giuseppe Scollo, 2012-12-06 The goal of the AMAST conferences is to foster algebraic methodology as a foundation for software technology and to show that this can lead to practical mathematical alternatives to the ad hoc approaches commonly used in software engineering and development The first two AMAST conferences held in May 1989 and May 1991 at the University of Iowa were well received and encouraged the regular organization of further AMAST conferences on a biennial schedule The third Conference on Algebraic Methodology and Software Technology was held in the campus of the University of Twente The Netherlands during the first week of Summer 1993 Nearly a hundred people from all continents attended the conference The largest interest received by the AMAST conference among the professionals extended to include the administration organizations as well AMAST 93 was opened by the Rector of the University of Twente followed by the Local Chairman Their opening addresses open this proceedings too The proceedings contains 8 invited papers and 32 selected communications The selection was very strict for 121 submissions were received
