The Third Component of Complement John D. Lambris, 2013-03-12 The third component of complement C3 is one of the most versatile proteins and an important participant in immune surveillance and immune response pathways Its multifunctionality is based on its ability to interact specifically with multiple serum complement proteins cell surface receptors and membrane associated regulatory proteins One of its most intriguing strategies of interaction with cell surfaces is the covalent binding of activated C3 through the internal thioester The field has expanded over the past 10 years and a wealth of information has accumulated C3 from various species and many of the human C3 binding proteins have been cloned and expressed Numerous cellular responses mediated by the different fragments of C3 have been described The findings that C3 interacts in a ligand receptor like fashion with proteins of nonself origin such as the gC of herpes simplex virus a 70 kDa protein from *Candida albicans* proteins from Epstein Barr virus etc has opened a new field of investigation The papers assembled in this volume summarize the wealth of data on the various aspects of the C3 interactions together they bring to the reader new information on the chemistry molecular genetics biology and pathophysiology of C3 and C3 binding proteins Emphasis is given to structural features as they relate to functions Spring 1989 JOHN D LAMBRIS HANS J MULLER EBERHARD Table of Contents J E VOLANAKIS Participation of C3 and Its Ligands in Complement Activation 1 S R BARNUM G FEY and B F TACK Biosynthesis and Genetics of C3
