Solidarity Between Parents and Their Adult Children in Europe Tineke Fokkema, Susan ter Bekke, Pearl A. Dykstra, 2008 At present our knowledge of the current state of solidarity between parents and their adult children in Europe is limited Insight into contemporary intergenerational solidarity is not only important for the well being of individuals but is also of great interest to policy makers Patterns of intergenerational solidarity are not only affected by social policies and services but also reveal a number of important social policy issues and dilemmas Will encouraging labour force participation among women and older workers mean they have less time to care for

their dependents Should formal care services be further expanded to relieve the burden faced by family members with the risk that they start to replace informal care This report aims to contribute to this insight by providing a more differentiated picture of the strength nature and direction of solidarity between parents and their adult children its variation among European countries and its determinants Our findings indicate that parent child ties are quite strong The majority of Europeans aged 50 and over live in close proximity and are in frequent contact with at least one of the children Moreover strong family care obligations still exist and a substantial amount of support is being exchanged between parents and their non co resident children Interesting differences however emerge between individuals and countries While fathers are more inclined to assist their children financially mothers have more frequent contact and exchange more help in kind with their children Being religious and having a large family have a positive impact on several dimensions of intergenerational solidarity Parental divorce and a better socioeconomic position of parents and children on the other hand lead to a weakening of parent child ties in many respects Contrary to common belief employed children show solidarity with their parents as much as those without a paid job Differences in the nature of intergenerational solidarity between the European countries tend to follow the general division into an individualistic north and a familistic south

How Children Learn from Parents and Parenting Others in Formal and Informal Settings: International and Cultural Perspectives, 2nd Edition Yvette Renee Harris, Claudio Longobardi, 2020-07-28 For several decades parent child cognitive interaction researchers have acknowledged that children learn cognitive skills in the context of their social and early environments These cognitive skills are often imparted to the children by parents or parenting others in formal or informal settings Thus for example such informal settings as dinner table conversations walks through grocery stores museums or neighborhoods become rich laboratories for children to learn varied cognitive skills ranging from numeracy concepts and language The way in which those learning opportunities are provided by parents structured by parents and scaffolded by parents may well vary depending on culture and other socio demographic variables and may well vary depending on formal or informal settings The aim of this Research Topic is to bring together scholarship from both global north and global south contexts which explores how children learn via parental involvement in formal and informal settings Publisher's note In this 2nd edition the following article has been added Harris YR and Longobardi C 2020 Editorial How Children Learn From Parents and Parenting Others in Formal and Informal Settings International and Cultural Perspectives Front Psychol 11 1026 doi 10.3389/fpsyg.2020.01026
