Participating Watershed Development Challenges For The Twenty First Century:

Embracing Watershed Politics Edella Schlager, William Blomquist, 2008-06-30 In *Embracing Watershed Politics* political scientists Edella Schlager and William Blomquist provide timely illustrations and thought provoking explanations of why political considerations are essential unavoidable and in some ways even desirable elements of decision making about water and watersheds With decades of combined study of water management in the United States they focus on the many contending interests and communities found in America s watersheds the fundamental dimensions of decision making and the impacts of science complexity and uncertainty on watershed management *Social Participation in Water Governance and Management* Kate A. Berry, Eric Mollard, 2010 Social participation in water management and governance recently became a reality in many economies and societies Yet the dimensions in which power regulation social equity and democracy building are connected with participation have been only tangentially analyzed for the water sector Understanding the growing interest in social participation involves appreciating the specificity of the contemporary period within its historic and geographic contexts as well as uncovering larger political economic and cultural trends of recent decades which frame participatory actions Within a wide variety of cases presented from around the world the reader will find critical analyses of participation and an array of political ecological processes that influence water governance Sixteen chapters from a diverse group of scholars and practitioners examine water rights definition hydropower dam construction urban river renewal irrigation organizations water development NGOs river basin management water policy implementation and judicial decision making in water conflicts Yet there are commonalities in participatory experiences across this spectrum of water issues The book s five sections highlight key dimensions of contemporary water management that influence and in turn are influenced by social participation These sections are participation and indigenous water governance participation and the dynamics of gender in water management participation and river basin governance participation and implementation of water management and participation and the politics of water governance Back cover **Participatory Pathways: People's Participation in Development Initiatives** Balakrishnan, Rajiv, 2007 *Participatory Pathways* People s Participation in Development Initiatives aims to create awareness about the issues that need to be tackled provide a grassroots perspective of the promise and perils of participatory pathways and a glimpse of the role people s participation can play in building a better world Covering topics like grassroots governance gender and ethics enabling frameworks and participatory planning this book draws attention to participation s promise while emphasizing the need to take cognizance of the obstacles in the way **Participatory Watershed Development** John Farrington, Cathryn Turton, A. J. James, 2000 Efforts have long been made in India to improve the management of major watersheds for ecological reasons such as reducing the siltation of reservoirs The management of micro watersheds of around 500 hectares is a more recent focus of policy and has both ecology and livelihoods as its objectives Experiments have shown that in some areas more than a doubling of resource

productivity can be achieved by careful rehabilitation Many watersheds contain both private and common land It is already clear from a number of efforts led by NGOs that to be equitable and institutionally sustainable the rehabilitation of both common and private lands needs action rooted in strong resource user groups capable of taking decisions in a participatory way and resolving conflict To build up groups in this way requires both time and skills both of which have proved elusive in government projects and programmes The key question addressed in this book is how far the approaches developed by NGOs can be adopted or adapted by the public sector and applied on a wide scale for without such approaches neither the ecological nor the livelihood benefits of watershed rehabilitation will be achieved

People, Policy, Participation Farhad Vania, Bansuri Taneja, 2004 Patterns of Social Exclusion in Watershed Development in India Eshwer Kale, 2020-06-23 This book explores the exclusion of community groups from the perspective of people's equal opportunities and equal access to newly generated economic benefits tracing the factors determining their denial and exclusion Paying specific attention to watershed development projects it considers the detailed processes involved in the denial of institutional and livelihood opportunities to resource poor groups and discusses potential avenues for their meaningful social inclusion in the governance of natural resources

A. Seeley,2000 Watershed development has been adopted in India to address land degradation and the need for increased agricultural productivity Women have tended to be marginalized in watershed development projects because of the focus on land development which given the control of land in many parts of India makes it male focused We argue that the fact that women are often left out of such projects matters because women play a central role in the management of natural resources Executive summary Water Law for the Twenty-First Century Philippe Cullet,Alix Gowlland-Gualtieri,Roopa Madhav,Usha Ramanathan,2009-10-27 This volume critically analyses legal issues arising under international law concerning the consequences of proposed water regulatory changes and their implementation The book looks at reforms in India in order to ask broader questions about the relevance of international law in national law and policy making *Proceedings RMRS.* ,1998 **Treatise on Water Science** ,2010-09-01 Water quality and management are of great significance globally as the demand for clean potable water far exceeds the availability Water science research brings together the natural and applied sciences engineering chemistry law and policy and economics and the Treatise on Water Science seeks to unite these areas through contributions from a global team of author experts The 4 volume set examines topics in depth with an emphasis on innovative research and technologies for those working in applied areas Published in partnership with and endorsed by the International Water Association IWA demonstrating the authority of the content Editor in Chief Peter Wilderer a Stockholm Water Prize recipient has assembled a world class team of volume editors and contributing authors Topics related to water resource management water quality and supply and handling of wastewater are treated in depth **Journal of Soil and Water Conservation in India** ,2008 **Droughts and Integrated Water Resource Management in South Asia** Jasveen Jairath,2008-11-11 Droughts have formed an inseparable part of South Asian history and culture with tragic consequences for a region that houses the greatest number of the world s poor However this volume challenges the popular conception of drought which is presented as an absolute shortage scarcity with respect to an implicit understanding of the

sufficiency of water It highlights the fact that while available water supplies may be a given quantum droughts are differentially experienced politically inspired and socially constituted It emphasises that the relative water scarcity needs to be appreciated and argues that water scarcity means different things for diverse constituencies of water users Policy prescriptions based on definitional premises will be flawed as a misrepresentation of drought as merely water scarcity serves a political agenda The editors and contributors of this volume critically evaluate the concept of drought the way it is defined its origin derivation and the purposes interests it serves This book is broadly divided into three major sections the thematic section country overviews and case studies Through these it attempts to Understand the concept of drought Map diversity in drought situations across South Asia Identify responses to drought Outline viable options for more integrated approaches to drought policies and mitigation strategies Initiate a process of dialogue on a more comprehensive public policy for drought management Comprehensive thought provoking informative and featuring new research data this collection will provide policy makers and professionals with the opportunity to discuss and debate policies for sustainable livelihood support systems and drought management It would also be an invaluable source of information for students and teachers working in the fields of Water and Natural Resource Management Environmental Planning Agricultural Economics Rural Development Public Policy and Public Administration
