**Particle Physics** Maurice Levy, 2012-12-06 The 1987 Cargese Summer Institute on Particle Physics was organized by the Universite Pierre et Marie Curie Paris M LEVY and J L BASDEVANT CERN M JACOB the Universite Catholique de Louvain D SPEISER and J WEYERS and the Katholieke Universiteit te Leuven R GASTHANS which since 1975 have joined their efforts and worked in common It was the 25th summer institute held at Cargese and the ninth one organized by the two institutes of theoretical physics at Leuven and Louvain la Neuve The 1987 school was centered around two main themes the recent developments in string theory and the physics of high energy colliders As the standard model of the fundamental interactions has repeatedly proved to be successful in explaining the experimental findings in particle physics more attention was given in this school to possible new features arising from string inspired models This led us to include in the program a series of lectures devoted to string theory per se They covered the more mathematical aspects of the theory as well as the phenomenological implications The second theme concerns high energy collider physics and was meant to prepare young physicists for the future experimental results to be expected from the pp and e e colliders It brought theorists and experimentalists actively together in their search for a better understanding of the high energy phenomena **Particle**

**Nonperturbative Quantum Field Theory** G. Hooft, A. Jaffe, G. Mack, P.K. Mitter, R. Stora, 2012-12-06 During the past 15 years quantum field theory and classical statistical mechanics have merged into a single field and the need for nonperturbative methods for the description of critical phenomena in statistical mechanics as well as for problems in elementary particle physics are generally acknowledged Such methods formed the central theme of the 1987 Cargese Advanced Study Institut e on Nonpert urbat ive Quantum Field Theory The use of conformal symmet ry has been of central interest in recent years and was a main subject at t he ASI Conformal invariant quantum field theory describes statistical mechanical systems exactly at a critical point and can be analysed to a remarkable ext ent by group t heoretical methods Very strong results have been obtained for 2 dimensional systems Conformal field theory is also the basis of string theory which offers some hope of providing a unified t heory of all interactions between elementary particles Accordingly a number of lectures and seminars were presented on these two topics After syst ematic introductory lectures conformal field theory on Riemann surfaces orbifolds sigma models and application of loop group theory and Grassmannians were discussed and some ideas on modular geometry were presented Other lectures combined traditional techniques of constructive quant um field theory with new methods such as the use of index t heorems and infinite dimensional Kac Moody symmetry groups The problems encountered in a quantum mechanical description of black holes were discussed in detail

*The Standard Model Higgs Boson* M.B. **Use of Services for Family Planning and Infertility, United States, 1982** Gerry E. Hendershot, Marjorie C. Horn, William D. Mosher, 1988 The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth NSFG conducted by the National Center for Health Statistics Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44 A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date Overall 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years There were no statistically significant differences between white 79% black 75% or Hispanic 77% wives or between the 2 income groups The 1982 survey questions were more comprehensive than those of earlier cycles of the survey The annual rate of visits for family planning services in 1982 was 1077 visits 1000 women Teenagers had the highest annual visit rate 1581 1000 of any age group for all sources of family planning services combined Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44 Similar declines with age also were found in the visit rates for white and black women separately Nevertheless the annual visit rate for black women 1334 1000 was significantly higher than that for white women 1033 The highest overall visit rate was for black women 15-19 years of age 1867 1000 Nearly 2/3 of all family planning visits were to private medical sources Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources as did black women age 15-24 White women age 20 and older had higher visit rates to private medical services than to clinics Never married women had higher visit rates to clinics than currently or formerly married women Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview During the 3 years before interview about 1.9 million women had infertility visits For all ever married women as well as for white and black women separately infertility services were more likely to be secured from private medical sources than from clinics The survey design reliability of the estimates and the terms used are explained in the technical notes
