A. Logunov,A.I. Oksak,I. Todorov,2012-12-06 The majority of the memorable results of relativistic quantum theory were obtained within the framework of the local quantum field approach The explanation of the basic principles of the local theory and its mathematical structure has left its mark on all modern activity in this area Originally the axiomatic approach arose from attempts to give a mathematical meaning to the quantum field theory of strong interactions of Yukawa type The fields in such a theory are realized by operators in Hilbert space with a positive Poincare invariant scalar product This classical part of the axiomatic approach attained its modern form as far back as the sixties It has retained its importance even to this day in spite of the fact that nowadays the main prospects for the description of the electro weak and strong interactions are in connection with the theory of gauge fields In fact from the point of view of the quark model the theory of strong interactions of Wightman type was obtained by restricting attention to just the physical local operators such as hadronic fields consisting of fundamental quark fields acting in a Hilbert space of physical states In principle there are enough such physical fields for a description of hadronic physics although this means that one must reject the traditional local Lagrangian formalism The connection is restored in the approximation of low energy phe nomenological Lagrangians *Coherence and Quantum Optics* L. Mandel,2012-12-06 This volume presents the written versions of papers that were delivered at the Third Rochester Conference on Coherence and Quantum Optics held on the campus of the University of Rochester during the three days of June 21 23 1972 The Conference was a sequel to two earlier meetings devoted to the same field of modern physics that were also held in Rochester in 1960 and in 1966 The scope of the Conference was largely confined to basic pro blems in the general area of optical coherence and quantum optics and excluded engineering applications that are well covered by other meetings Approximately 250 scientists from 9 countries participated most of whom are active workers in the field Altogether 72 papers including 26 invited papers were presented in 17 sessions The papers dealt mainly with the subjects of resonant pulse propagation lasers quantum electrodynamics and alternative theories optical coherence coherence effects in spontaneous emis sion light scattering optical correlation and fluctuation measure ments coherent light interactions and quantum noise The program was organized by a committee consisting of N Bloembergen Harvard University J H Eberly
