Passive Solar Architecture:

Passive Solar Architecture David Bainbridge, Ken Haggard, 2011-08-18 New buildings can be designed to be solar oriented naturally heated and cooled naturally lit and ventilated and made with renewable sustainable materials no matter the location or climate In this comprehensive overview of passive solar design two of America's solar pioneers give homeowners architects designers and builders the keys to successfully harnessing the sun and maximizing climate resources for heating cooling ventilation and daylighting Bainbridge and Haggard draw upon examples from their own experiences as well as those of others of more than three decades to offer both overarching principles as well as the details and formulas needed to successfully design a more comfortable healthy and secure place in which to live laugh dance and be comfortable Even if the power goes off Passive Solar Architecture also discusses greener and more sustainable building materials and how to use them and explores the historical roots of green design that have made possible buildings that produce more energy and other resources than they use *Passive Solar Architecture Pocket Reference* Ken Haggard, David A. interested in sustainable or zero energy design knows the design and building industries have the potential to significantly reduce greenhouse gas emissions across the globe The Solar Decathlon is an international event in which universities from around the world compete in the design and construction of a one bedroom zero energy house This book provides an in depth yet accessible analysis of the architecture and passive design strategies of the houses in the 2007 Solar Decathlon These houses are the result of thousands of hours of research and development from twenty universities around the world Divided into three parts the book provides an initial section investigating the architecture passive design and systems layout of the twenty houses a diagrammatic comparison of the architecture and passive design characteristics of each of the twenty houses in order of ranking by the Architecture Comfort Zone and overall scores received in the competition a deep analysis of the relationship between architecture passive design and mechanical systems design as compared to the rankings received in the various contests This analysis considers the decisions made by the competing teams and highlights the success of the design strategies employed Students educators practitioners and researchers of architecture design and engineering will find this an informative and inspirational book It examines the relationship between design and environmental principles and provides invaluable insight into some of the most innovative off the grid and zero energy houses in the world With a

Foreword by John D Quale Assistant Professor of Architecture and ecoMOD Project Director University of Virginia **A House in the Sun** Daniel A. Barber, 2016-10-13 A House in the Sun describes a number of experiments in solar house heating in American architectural engineering political economic and corporate contexts from the beginning of World War II until the late 1950s Houses were built across the Midwest Northeast and Southwestern United States and also proposed for sites in India South Africa and Morocco These experiments developed in parallel to transformations in the discussion of modern architecture relying on new materials and design ideas for both energy efficiency and claims to cultural relevance Architects were among the myriad cultural and scientific actors to see the solar house as an important designed element of the American future These experiments also developed as part of a wider analysis of the globe as an interconnected geophysical system Perceived resource limitations in the immediate postwar period led to new understandings of the relationship between energy technology and economy The solar house both as a charged object in the milieu of suburban expansion and as a means to raise the standard of living in developing economies became an important site for social technological and design experimentation This led to new forms of expertise in architecture and other professions Daniel Barber argues that this mid century interest in solar energy was one of the first episodes in which resource limitations were seen as an opportunity for design to attain new relevance for potential social and cultural transformations Furthermore the solar discussion established both an intellectual framework and a funding structure for the articulation of and response to global environmental concerns in subsequent decades In presenting evidence of resource tensions at the beginning of the Cold War the book offers a new perspective on the histories of architecture technology and environmentalism one more fully

entangled with the often competing dynamics of geopolitical and geophysical pressures *Solar Buildings and Neighborhoods* Caroline Hachem-Vermette, 2020-05-30 This book presents the main principles for designing buildings and neighborhoods with increased potential to capture and utilize solar energy It discusses practical issues in the design of the built environment and their impact on energy performance and a range of design considerations from building components e g the building envelope to urban planning issues e g density and street layouts In addition to design guidelines on how to increase buildings potential to capture solar energy the book provides creative tips to increase the aesthetic value of solar technology integration in buildings Helping readers plan energy efficient buildings with innovative building envelope technologies and to understand the impact of early stage design considerations on the energy performance of buildings and communities the book offers a valuable source of information for building professionals including architects engineers and urban planners It can also serve as a reference guide for academics and students of energy efficiency in buildings and urban planning **Advances in Passive Cooling** Mat Santamouris, 2012-05-16 Following a rapid increase in the use of air conditioning in buildings of all types the energy demand for powering such devices has become a significant cause for concern Passive cooling is increasingly being thought of as the best alternative to air conditioning This book offers the latest knowledge and techniques on passive cooling enabling building professionals to understand the state of the art and employ relevant new strategies With separate chapters on comfort urban microclimate solar control ventilation ground cooling and evaporative and radiative cooling this authoritative text will also be invaluable for architects engineers and students working on building physics and low energy design *Advances in Passive Cooling* is part of the BEST series edited by Mat Santamouris The aim of the series is to present the most current high quality theoretical and application oriented material in the field of solar energy and energy efficient buildings Leading international experts cover the strategies and technologies that form the basis of high performance sustainable buildings crucial to enhancing our built and urban environment *Passive Cooling of Buildings* D. Asimakopoulos, 2013-10-31 Energy use in buildings in the EU represents about 40% of the total annual energy consumption With greater awareness of the need to reduce energy consumption comes a growth of interest in passive cooling particularly as an alternative to air conditioning This book describes the fundamentals of passive cooling together with the principles and formulae necessary for its successful implementation The material is comprised largely of information and results compiled under the SAVE European Research Programme Solar Architecture in Cool Climates Colin Porteous, 2012-04-27 A must read for practitioners teachers and others interested in or working with energy use in the built environment including a delightful set of examples Ann Grete Hestnes former President of the International Solar Energy Society *Solar Architecture in Cool Climates* is an invaluable primer on low energy building design combining accessible information with convincing arguments enabling new techniques to be implemented in daily practice Approaching the topic in a thematic manner the book provides inspiration an understanding of key principles and technical data on the design of

solar buildings in higher latitudes The text is enlivened through direct experience of case studies from Europe and North America dealing with new build retrofitting and conceptual projects that outline future potential the principles being equally applicable to equivalent southern latitude locations The authors examine the dilution of additional costs through different strategies the tensions between energy efficiency and environmental quality and the proactive control of energy in building design Promoting flexibility and opportunity to a diverse audience including those who use procure and finance buildings the book aims to bring the design of green solar buildings in cool climates from special interest status into the mainstream Broader environmental issues relating to solar architecture are addressed in the final chapter again drawing on case studies from the authors own wide experience Solar Architecture in Cool Climates is written for architects and other building designers students of architecture and other professionals interested in sustainable architecture renewable energy and engineering
