Past Is Prologue A Centennial Profile:

Company Men Clark Davis, 2001-10-12 The story of the early decades of American big business when white collar jobs were new and their future uncertain America's white collar workers form the core of the nation's corporate economy and its expansive middle class But just a century ago white collar jobs were new and their future anything but certain In *Company Men* Clark Davis places the corporate office at the heart of American social and cultural history examining how the nation's first generation of white collar men created new understandings of masculinity race community and success all of which would dominate American experience for decades to come *Company Men* is set in Los Angeles the nation's corporate frontier of the early twentieth century Davis shows how this California city often considered on the fringe of American society for the very reason that it was new and growing so rapidly displayed in sharp contours how America's corporate culture developed The young men who left their rural homes for southern California a century ago not only helped build one of the world's great business centers but also redefined middle class values and morals Of interest to students of business history gender studies and twentieth century culture this work focuses on the company man as a pivotal actor in the saga of modern American history

Structuring the Information Age JoAnne Yates, 2005-06-22 Structuring the Information Age provides insight into the largely unexplored evolution of information processing in the commercial sector and the underrated influence of corporate users in shaping the history of modern technology JoAnne Yates examines how life insurance firms where good record keeping and repeated use of massive amounts of data were crucial adopted and shaped information processing technology through most of the twentieth century The book analyzes this process beginning with tabulating technology the most immediate predecessor of the computer and continuing through the 1970s with early computers Yates elaborates two major themes the reciprocal influence of information technology and its use and the influence of past practices on the adoption and use of new technologies In the 1950s insurance industry leaders recognized that computers would enable them to integrate processes previously handled separately but they also understood that they would have to change their ways of working profoundly to achieve this integration When it came to choosing equipment and applications most companies ultimately preferred a gradual incremental migration to an immediate and radical transformation In tracing this process Yates shows that IBM's successful transition from tabulators to computers in part reflected that vendor's ability to provide large customers such as insurance companies with the necessary products to allow gradual change In addition this detailed industry case study helps explain information technology's so called productivity paradox showing that firms took roughly two decades to achieve the initial computerization and process integration that the industry set as objectives in the 1950s
