

Eating Appliance

Inventor: Jean B.A. La Jeunesse

Date of patent: March 1922 • Patent number: US Patent 1,409,731

Automatic eater

This device was intended to assist the disabled who have difficulty in lifting food to their mouths. A swivel arm was held upright by a weight (21). The user could bring the arm down by means of the pedal (17), and the fork on the end would spear a portion of food on the plate. The whole device could be removed to the table by means of a G-clamp and removed when it was no longer needed. And the device included an additional pulley (18) to be used if the device is needed by a left-handed person. The words simple and effective... don't come to mind.
