Passion To Learn An Inquiry Into Autodidacticism:

The Passion to Learn Joan Solomon, 2003-09-02 This inquiry into self study provides fresh insight into the motivation to learn Beginning and ending with comprehensive and stimulating discussions of learning theories it includes fourteen case studies of autodidacticism in informal learning **Supporting Self-Directed Learning in Science and Technology**

Beyond the School Years Léonie J. Rennie, Susan M. Stockmayer, John K. Gilbert, 2018-12-21 While much has been written about science education from pre K through to postgraduate study interaction with science and technology does not stop when schooling ends Moving beyond scholarship on conventional education this book extends the research and provides an original in depth look at adult and lifelong learning in science and technology By identifying the knowledge and skills that individuals need to engage in self directed learning the book highlights how educators can best support adult learners beyond the years of formal schooling Through case studies and empirical analysis the authors offer a research based exploration of adults self directed learning and provide tools to support adults learning experiences in a wide range of environments while being inclusive of all educational backgrounds **Really Free Culture** , Edward Elgar and His World Byron Adams, 2011-11-14 Edward Elgar 1857 1934 is undoubtedly one of the most fascinating important and influential figures in the history of British music He rose from humble beginnings and achieved fame with music that to this day is beloved by audiences in England and his work has secured an enduring legacy worldwide Leading scholars examine the composer s life in Edward Elgar and His World presenting a comprehensive portrait of both the man and the age in which he lived Elgar s achievement is remarkably varied and wide ranging from immensely popular works like the famous *Pomp and Circumstance March no 1* a standard feature of American graduations to sweeping masterpieces like his great oratorio *The Dream of Gerontius* The contributors explore Elgar s Catholicism which put him at odds with the prejudices of Protestant Britain his glorification of British colonialism his populist tendencies his inner life as an inspired autodidact the aristocratic London drawing rooms where his reputation was made the class prejudice with which he contended throughout his career and his anguished reaction to World War I Published in conjunction with the 2007 Bard Music Festival and the 150th anniversary of Elgar s birth this elegant and thought provoking volume illuminates the greatness of this accomplished English composer and brings vividly to life the rich panorama of Victorian and Edwardian Britain The contributors are Byron Adams Leon Botstein Rachel Cowgill Sophie Fuller Daniel M Grimley Nalini Ghuman Gwynne Deborah Heckert Charles Edward McGuire Matthew Riley Alison I Shiel and Aidan J Thomson Some images inside the book are unavailable due to digital copyright restrictions **Distributed Creativity** Eric F. Clarke, Mark Doffman, 2017-11-15 Creative practice in music particularly in traditional concert culture is commonly understood in terms of a rather stark division of labour between composer and performer But this overlooks the distributed and interactive nature of the creative processes on which so much contemporary music depends The incorporation of two features improvisation and collaboration into much contemporary

music suggests that the received view of the relationship between composition and performance requires reassessment. Improvisation and collaborative working practices blur the composition performance divide and in doing so provide important new perspectives on the forms of distributed creativity that play a central part in much contemporary music.

Distributed Creativity: Collaboration and Improvisation in Contemporary Music explores the different ways in which collaboration and improvisation enable and constrain creative processes. Thirteen chapters and twelve shorter Interventions offer a range of perspectives on distributed creativity in music on composer performer collaborations and on contemporary improvisation practices. The chapters provide substantial discussions of a variety of conceptual frameworks and particular projects while the Interventions present more informal contributions from a variety of practitioners performers composers improvisers giving insights into the pleasures and perils of working creatively in collaborative and improvised ways. *The Routledge Companion to Creativity* Tudor Rickards, Mark A. Runco, Susan Moger, 2008-11-19. Comprising contributions written by a wide array of leading creativity scholars. The Routledge Companion to Creativity is an exciting collection of articles that assesses contemporary issues in creativity research and practice and identifies key themes and trends. **The Palgrave International Handbook of Alternative Education** Helen E. Lees, Nel Noddings, 2016-08-31. This state of the art comprehensive Handbook fully explores the field of alternative education on an international scale. Alternatives to mainstream schooling and education are becoming increasingly recognised as pertinent and urgent for better understanding what really works in successfully educating children and adults today especially in light of the increased performance driven and managerially organised economic modelling of education that dominates. For too long we have wondered what exactly education done otherwise might look like and here we meet individual examples as well as seeing what alternative education is when a collection becomes greater than the sum of parts. The Handbook profiles numerous empirical examples from around the world of education being done in innovative and excitingly democratic and autonomous ways from Forest Schools and Home Education through to new technologies neuroscience and the importance of solitude. The book also sets out important theoretical perspectives to inform us why seeing education through an alternative lens is useful as well as urgently needed. Global in its perspective and definitive in content this one stop volume will be an indispensable reference resource for a wide range of academics students and researchers in the fields of Education Education Policy Sociology and Philosophy as well as educational practitioners. *Women and Science, 17th Century to Present* Véronique Molinari, 2011-05-25. If women's interest and participation in the advancement of science has a long history the academic study of their contributions is a far more recent phenomenon to be placed in the wake of second wave feminism in the 1970s and the advent of women's studies which have since then given impetus to research on female figures in specific fields or more generally speaking on women's battles to gain access to knowledge education and recognition in the scientific world. These studies while providing a useful insight into the contributions of a few more or less well known figures have mostly focused however on the obstacles

that women have had to overcome in the field of education and employment or in their quest for acknowledgement by their male peers The aim of this volume is to try and approach the issue from a different and more comprehensive point of view taking into account not only the position of women in science but also the link between women and science through the analysis of various kinds of discourse and representation such as the press poetry fiction biographies and autobiographies or professional journals including that of women themselves The questions of the presentation or re presentation of science by women are thus at the core of this study as well as that of the portrayal and self portrayal of women in the sciences whether in the educational or the professional field A final part examines how women are represented in science fiction which like science itself has traditionally been a field dominated by men [Alternative Universities](#) David J. Staley, 2019-03-26

Imagining the universities of the future How can we re envision the university Too many examples of what passes for educational innovation today MOOCs especially focus on transactions on questions of delivery In *Alternative Universities* David J Staley argues that modern universities suffer from a poverty of imagination about how to reinvent themselves Anyone seeking innovation in higher education today should concentrate instead he says on the kind of transformational experience universities enact In this exercise in speculative design Staley proposes ten models of innovation in higher education that expand our ideas of the structure and scope of the university suggesting possibilities for what its future might look like What if the university were designed around a curriculum of seven broad cognitive skills or as a series of global gap year experiences What if as a condition of matriculation students had to major in three disparate subjects What if the university placed the pursuit of play well above the acquisition and production of knowledge By asking bold What if questions Staley assumes that the university is always in a state of becoming and that there is not one idea of the university to which all institutions must aspire This book specifically addresses those engaged in university strategy university presidents faculty policy experts legislators foundations and entrepreneurs those involved in what Simon Marginson calls university making Pairing a critique tempered to our current moment with an explanation of how change and disruption might contribute to a new golden age for higher education *Alternative Universities* is an audacious and essential read *Science of the People* Joan Solomon, 2013-02-11

How do people understand science How do they feel about science how do they relate to it what do they hope from it and what do they fear about it *Science of the People* Understanding and using science in everyday contexts helps answer these questions as the result of painstaking interviewing by Professor Joan Solomon of all and sundry in a fairly typical small town The result is a unique overview of how a very wide range of adults united only by local geography relate to science Many of the findings run contrary to what is widely believed about how science is learnt and about how people view it Chapters include An Approach to Awareness Publics for Science Ethics and Action Interpretation and Change Joan Solomon who sadly died before this book could be published enjoyed an international reputation in science education After a long career teaching science in secondary schools she moved into the university sector and ending up holding chairs of

science education at the Open University King's College London and the University of Plymouth She was a world leader in her subject and inspired classroom teachers and wrote a number of very influential papers with some of them She produced many important books booklets and other resources to help science teachers and science educators get to grips with the history and philosophy of science and the teaching of energy amongst other topics This book is essential reading for those involved in Science education and educational policy

International Handbook of Comparative Education Robert Cowen, Andreas M. Kazamias, 2009-08-22 This two volume compendium brings together leading scholars from around the world who provide authoritative studies of the old and new epistemic motifs and theoretical strands that have characterized the interdisciplinary field of comparative and international education in the last 50 years It analyses the shifting agendas of scholarly research the different intellectual and ideological perspectives and the changing methodological approaches used to examine and interpret education and pedagogy across different political formations societies and cultures

Creativity and Art Margaret A. Boden, 2012-10-25 Margaret Boden presents a series of essays in which she explores the nature of creativity in a wide range of art forms Creativity in general is the generation of novel surprising and valuable ideas conceptual theoretical musical literary or visual Boden identifies three forms of creativity combinational exploratory and transformational These elicit differing forms of surprise and are defined by the different kinds of psychological process that generate the new ideas Boden examines creativity not only in traditional fine art but also in craftworks and some less orthodox approaches namely conceptual art and several types of computer art Her Introduction draws out the conceptual links between the various case studies showing how they express a coherent view of creativity in art

Secrets of a Buccaneer-Scholar James Bach, 2012-12-11 Like so many young people James Bach the son of the famous author Richard Bach Jonathan Livingston Seagull struggled in school While he excelled in subjects that interested him he barely passed the courses that didn't By the time he was sixteen he had dropped out He taught himself computer programming and software design and started working as a manager at Apple Computers only four years later and he never looked back With *The Secrets of a Buccaneer Scholar* James shows us how he developed his own education on his own terms how that unorthodox education brought him success and how the reader can do it too In his uniquely pithy and anecdotal style James uses the metaphor of a buccaneer to describe anyone whose love of learning and pursuit of knowledge is not bound by institutions or authorities James outlines the eleven elements of his self education method and shows how every reader simply investing time and passion into educating themselves about the things that really interest them can develop a method for acquiring knowledge and expertise that fits their temperaments and showcases their unique abilities and skills Particularly well suited for an audience grappling with the challenges posed by the internet but also appropriate for parents looking to help and school their children or employees hoping to jumpstart their careers *The Secrets of a Buccaneer Scholar* is a groundbreaking and uplifting work that empowers and inspires its readers *Internationale Bibliographie der Rezensionen wissenschaftlicher Literatur*, 2006

The Base of the Iceberg Alan Rogers, 2014-10-22 Alan Rogers looks at learning formal nonformal and informal and examines the hidden world of informal unconscious unplanned learning He points out the importance of informal learning for creating tacit attitudes and values knowledge and skills which influence conscious planned learning formal and non formal Moreover he explores the implications of informal learning for educational planners and teachers in the context of lifelong learning While mainly aimed at adult educators the book's arguments apply also to schooling and higher education in both industrialised societies and developing countries where large numbers of children and adults are not and have not been in school and so rely on informal learning to manage change
