Pediatric Regional Anesthesia Bernard J. Dalens, 2019-08-15 This book provides a precise description of safe and reliable procedures for regional anesthesia in children. It covers the advantages and disadvantages, specific features related to the pediatric range of ages and the practical importance of the described procedures. Written in two main parts, emphasis is placed on scientific basis and technical approach. It includes both anatomical and psychological aspects of pain as well as detailed viewpoints of parents, children, surgeons, and anesthesiologists. This book is a must for all anesthesiologists and will be particularly useful to students of medicine and anesthesiology and nurses working with intensive care units.

Ultrasound Guidance in Regional Anaesthesia Peter Marhofer, 2010-09-09 Ultrasonographic guidance for regional anaesthetic blocks is an innovative technique that allows for the direct visualization of nerves, adjacent structures, and the position of the needle, as well as for the precise observation of the spread of local anaesthetic. The advantages of the technique allow for the exact administration of moderate volumes of local anaesthetic, reducing the risk of complications. Written by a physician with 16 years' experience in ultrasound-guided regional anaesthesia, this second edition of the well-received practical handbook provides a concise summary of the basics of ultrasound technology and the most recent techniques in the use of ultrasound to guide peripheral nerve blocks, focusing specifically on ultrasound-guided peripheral nerve block techniques. All chapters have been carefully revised to provide the most recent knowledge in the topic of ultrasound in regional anaesthesia. A strong focus has still been attached to anatomical descriptions and subsequent practical implementations. Paediatric applications are now included in this new edition to aid paediatric anaesthesiologists, as well as the incorporation of neuraxial techniques to complete the entire topic. With illustrated colour images throughout, this book is highly relevant to anaesthesiologists and pain specialists with an interest in regional anaesthesia.
