Hirmis,2018-03-12

Meticulously researched and written by Dr Amer K Hirmis the book takes readers 6000 years back to early Mesopotamian polity culture and religious codes which shaped the economy and continue to shape much of the body of Iraq s polity economy and society today Economic inefficiency inequality and lack of sufficient employment are common threads that run throughout Mesopotamian Iraqi economic history The persistence of poverty high unemployment conscious discrimination against women and a polity dictating blind allegiance and obedience from the subjects to the ruler denied the Iraqis achieving economic development the ultimate aim of which is the sustained improvement of the well being of the people Even when economic growth was attained it was desperately non inclusive With a novel approach to economic development this book examines Iraq s economy over the past 100 years It establishes the historical roots in the consumption patterns nature of the producers the economic structure trade monetary and fiscal policy and resource allocation In all these areas the echoes from the ancient past are striking The principles of Sumerian taxes are still applied in present day Iraq The book proposes a set of conditions which will need to be created for Iraq to achieve economic development and functional democracy in the distant future      *History of Spatial Economic Theory* C. Ponsard,2012-12-06 The concept of space has always been a fundamental element in various branches of knowledge The concept often appears in the evolution of knowledge either as a basis of theory or as a factor in research It is associated more or less directly with all the history of scientific thought At the level of simple common sense the importance of the concept of space is only equaled by its lack of precision It was part of legend before becoming part of history To indicate the founding of Rome Romulus started by drawing the boundaries locating its landmarks in a discontinuous space after having cut the limits of a continuous space However neither geographical explorations nor mathematico logical speculations have ever completely removed the mystery from the concept of space For all its simple common sense its mystique remains intact The privileged position occupied by the concept of space in the history of science and the vagueness of its meaning in the current use of the term far from constituting a paradox are mutually explanatory Every concept of space is necessarily the result of an abstraction whether the process by

which it is reached is through mathematics psychology biology or any other discipline At the level of common knowledge the space time concept is the base upon which are arranged individual experiences It is thus easy to understand how the concept of space can be understood only through an orderly arrangement of these experiences and their integration into a logical scheme

Interdependent Development Harold Brookfield, 2012-08-06 Rather than being a book about development per se this work first published in 1975 is instead a book about ideas about development designed for those drawn by a concern over social injustice into the development field In a selective review of theory which gives particular emphasis to the spatial dimension in Western Marxist and neo Marxist thought Harold Brookfield traces the evolution of ideas about world inequality and the problem of development from the days before the underdeveloped countries were considered to be a major problem through the years dominated by economic growth to the more searching approaches of the contemporary era The central argument of the book is that development is a totality which cannot properly be understood by separation into parts The developed and underdeveloped countries constitute one interdependent system and change in one cannot be understood without consideration of the other
